Drinking Water & Groundwater Bureau  
Annual Compliance Report on Public Water System Violations for 2015

## INTRODUCTION

The 1996 Amendments to the Safe Drinking Water Act (SDWA) require each state to prepare an annual compliance report summarizing violations incurred by public water systems. The annual compliance report is submitted to the U.S. Environmental Protection Agency (EPA) and made available to the public. The purpose of this report is to summarize the number and types of violations that public water systems receive as a result of failing to meet various requirements of the Safe Drinking Water Act.

New Hampshire's 2015 Annual Compliance Report contains an overview of the drinking water program and a summary of regulated systems. Federal violations and their significance to various regulated monitoring programs and contaminants are discussed. There are tables and charts that reflect the compliance of New Hampshire's public water systems, either within this document or added as an appendix.

### THE DRINKING WATER PROGRAM: AN OVERVIEW

EPA established the Public Water System Supervision (PWSS) Program under the authority of the 1974 Safe Drinking Water Act. Under the SDWA and the 1986 Amendments, EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels (MCLs) and Maximum Residual Disinfectant Levels (MRDLs). For some regulations, EPA establishes treatment techniques in lieu of an MCL to control unacceptable levels of contaminants in water. They also regulate how often public water systems (PWSs) monitor their water for contaminants and report the monitoring results to the states or to EPA. Generally, the larger the population served by a water system, the more frequent the monitoring and reporting (M/R) requirements. In addition, EPA requires PWSs to monitor for unregulated contaminants to provide data for future regulatory development. Finally, EPA requires PWSs to notify their consumers when they have violated these regulations. The 1996 Amendments to the SDWA require consumer notification to include a clear and understandable explanation of the nature of the violation, its potential adverse health effects, and steps that the PWS is undertaking to correct the violation.

The SDWA applies to the 50 states, the District of Columbia, Native American lands, Puerto Rico, the Virgin Islands, American Samoa, Guam and the Commonwealth of the Northern Mariana Islands.

The SDWA allows states and territories to seek EPA approval to administer their own PWSS Programs. The authority to run a PWSS Program is called primacy. For a state to receive primacy, EPA must determine that the state meets certain requirements laid out in the SDWA and federal regulations, including the adoption of state drinking water regulations that are at least as stringent as the Federal regulations. Primacy also requires a state demonstration that they can enforce the program requirements. Of the 56 states and territories, all but Wyoming and the District of Columbia have primacy. EPA Regional Offices administer the PWSS Programs within these two jurisdictions.

## NEW HAMPSHIRE PUBLIC WATER SYSTEM PROFILE

New Hampshire defines a public water system (PWS) as a system that provides water via piping or other constructed conveyances for human consumption to at least 15 service connections or *designed to serve an average of at least 25 people* for at least 60 days each year. In accordance with New Hampshire rule, Env-Dw 401.01(d), the population served by a Community PWS is determined by a household equivalent of 2.5 people, or 2.5 people per service connection.

There are three types of public water systems: Community (“C”) systems such as mobile home parks or municipalities, Non-Transient Non-Community (“P”) systems such as schools or factories, or Transient Non-Community (“N”) systems such as restaurants and campgrounds. For this report, when the acronym “PWS” is used, it means systems of all types unless specified in greater detail.

The PWS inventory for 2015 consists of 2,449 active systems, of which 698 are “C” systems serving a population of 868,460. There are 444 “P” systems and 1,307 “N” systems. Most of New Hampshire’s “C” systems are very small, serving a population less than 500. Eighty-one percent (566) Community water systems serve a population of less than or equal to 500.

The following chart reflects an average system count over the last three years.

### Active Public Water Systems in NH

### Community Systems by Population Ranges

Population Categories	Population Ranges	# of Community Systems	Total Population Served
Large Systems	>50,000	2	220,682
Medium Systems	10,001 – 50,000	16	330,795
	3,301 – 10,000	21	116,179
Small Systems	1,001 – 3,300	54	105,990
	501 – 1,000	35	25,167
	101 – 500	253	51,331
	25 – 100	313	18,234
	<25	4	82

Other New Hampshire public water system statistics as of 2015:

Community Systems	# Systems	Pop Served
Groundwater Only	635	325,890
Groundwater Purchasing Groundwater	18	44,700
Surface Water Only	20	218,873
Purchased Surface Water Only	26	72,274
Surface and Groundwater (combined sources)	17	284,152
Groundwater Purchasing Surface Water	3	3080
Purchased Groundwater Only	18	8,690

The “population served” numbers in the tables above and cited throughout this report represent the number of people served as estimated by Community water systems and reported to the New Hampshire Department of Environmental Services (NHDES). For many “C” systems, *non-residents make up a significant percentage of those numbers*. Statewide, second homes make up 10.4% of the housing stock, according to the 2010 U.S. Census. If one were to compare the state resident population of 1,330,608 (U.S. Census 2015 estimate), with the total estimated population served by all “C” systems, it would appear that approximately 65% of the population is served by “C” systems and 35% use private wells. However, the Community water systems estimate would be higher than the actual percentage because it does not take into account the significant non-resident population served. NHDES’ Drinking Water and Groundwater Bureau (DWGB) is not aware of data regarding how the “C” water system population served is divided between residents and non-residents. However, a survey by the New Hampshire Department of Health and Human Services (NHDHHS) in 2006 found 44.4% of households use private wells. Using this number as a starting point, with an additional 7,101 new non-replacement domestic water supply wells completed in New Hampshire between mid-2006 and the end of 2010, the DWGB estimates that 46% of New Hampshire residents relied on private wells in 2010. Furthermore, in the 2014 Behavioral Risk Factor Surveillance System Survey conducted by NHDHHS, 41.9% of respondents indicated that they use a private well as their main source of drinking water at home, compared with 41.4% using a public water system and 15.2% using bottled water.

Approximately 325,890 people, or about 38% of the “C” water system population, are served by “C” systems that draw only from groundwater.

Approximately 218,873 people, or about 25% of the “C” water system population, are served by “C” systems that draw only from surface water.

All PWSs are required to comply with drinking water standards, water quality monitoring and reporting requirements, public notification requirements, and operational and construction standards. The DWGB tracks and monitors compliance with regulations, enforces the regulations, administers the Permit-to-Operate program, provides financial assistance through the State Revolving Fund (SRF) Program, conducts sanitary surveys, provides technical assistance, and trains and certifies water system operators. The DWGB also implements a Source Water Protection Program.

### **ANNUAL STATE PWS REPORT**

Each quarter, primacy states submit data to the Safe Drinking Water Information System (SDWIS), an automated database maintained by EPA. The data submitted include, but are not limited to, PWS inventory information, the incidence of MCL exceedances, MRDLs, monitoring and treatment technique violations and information on enforcement activity related to these violations. Section 1414(c)(3) of the Safe Drinking Water Act requires states to provide EPA with an annual report of violations of the primary drinking water standards. This report provides the numbers of violations in each of six categories: MCLs, MRDLs, treatment techniques, variances and exemptions, significant monitoring violations and significant consumer notification violations. EPA Regional Offices also report any federal enforcement actions taken but those enforcement actions are not part of this report.

The information in this report is based on New Hampshire’s drinking water database, as well as SDWIS. Although the two databases are mostly synchronized, there are a few discrepancies where SDWIS counts unresolved violations from past years (i.e., Lead and Copper Rule (LCR) and Consumer Confidence Rule (CCR)). Prior year violations that are not included in this report can be found on our OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

#### **Maximum Contaminant Level (MCL) Violations**

Under the Safe Drinking Water Act, EPA sets national limits on contaminant levels in drinking water to ensure that the water is safe for human consumption. These limits are known as Maximum Contaminant Levels. This report includes MCL violations for microbiological contaminants under the Total Coliform Rule (TCR) and MCL violations for regulated chemical contaminants.

#### **Maximum Residual Disinfectant Level (MRDL)**

EPA sets national limits on residual disinfectant levels in drinking water to reduce the risk of exposure to disinfectant byproducts formed when public water systems add chemical disinfectant for either primary or residual treatment. These limits are known as Maximum Residual Disinfectant Levels.

#### **Treatment Technique (TT) Violations**

For some regulations, EPA establishes treatment techniques (TT) in lieu of an MCL to control unacceptable levels of certain contaminants. For example, treatment techniques have been established for viruses, bacteria and turbidity under the Surface Water Treatment Rule (SWTR). In some cases, such as the Lead and Copper Rule (LCR), once an exceedance has occurred, the PWS is required to conduct public education. Failure to do so results in a treatment technique violation.

### **Significant Monitoring (M/R) Violations**

A PWS is required to monitor and verify that the level of a contaminant, if present in the water, does not exceed the MCL. Generally, the larger the population served the more samples the PWS is required to take. If a PWS fails to have its water tested as required then a monitoring (M/R) violation occurs. For this report, significant monitoring violations are defined as any major monitoring violation (except for the Surface Water Treatment Rule) occurs when no samples were taken or no results are reported during a compliance period. A major Surface Water Treatment Rule Monitoring/Reporting violation occurs when fewer than 90% of the required samples are taken or no results are reported during a reporting interval.

### **Variations and Exemptions**

Variations and exemptions to specific requirements under the SDWA Amendments of 1996 may be granted under certain circumstances. If a PWS cannot meet the MCL, due to the characteristics of the raw water sources reasonably available, a primacy state can grant the PWS a variance from the applicable primary drinking water regulation, with the condition that the system install the best available technology, treatment techniques, or other means which the Administrator finds are available (taking cost into account). No New Hampshire PWS has been issued a variance or an exemption.

### **Significant Consumer Notification Violations**

Every Community water system is required to deliver to its customers a consumer confidence report, which is a brief annual water quality report. This report is to provide information on source water, the levels of any detected contaminants, and compliance with drinking water regulations, as well as include some educational material. A Community water system that completely fails to provide customers with the required annual water quality report will incur a significant consumer notification violation.

## **COMPLIANCE SUMMARY**

A summary of public water system violations for 2015 is included in Appendix A. The information includes the number of total violations and total number of water systems in violation of a particular regulated contaminant. The regulatory contaminant categories are:

- Total Coliform Rule (TCR) and Revised Total Coliform Rule (RTCR)**
- Ground Water Rule (GWR)**
- Disinfectants/Disinfection Byproducts Rule (D/DBPR1)**
- Surface Water Treatment Rule (SWTR)**
- Chemical Monitoring (Phase I, II, IIB, and Rules and Radionuclides)**
- Lead and Copper Rule (LCR)**
- Consumer Confidence Report Rule (CCR)**

Violations from these programs and any resulting enforcement actions (along with their return to compliance status) are the basis of this Annual Compliance Report and can be found in the Appendices. Additional information about the water systems is also on the NHDES OneStop website at: <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

A description of these programs and the pertinent violations follow.

## Total Coliform Rule (TCR)

The Total Coliform Rule (TCR) promulgated in 1989, establishes legal limits for total coliform bacteria levels in drinking water. In addition, the TCR determines the type and frequency of bacteria testing that must be conducted by each public water system.

Coliform bacteria represent a broad class of bacteria commonly found in the environment. Coliforms are considered an “indicator” organism because their presence in drinking water suggests that other disease causing organisms may be present. Disease symptoms include diarrhea, cramps, nausea, vomiting and associated headaches and fatigue. Although total coliform bacteria are generally not harmful themselves, infants, elderly and immuno-compromised people may be at increased risk. The presence of coliform bacteria in drinking water indicates that the source has become contaminated, the integrity of the distribution system has been compromised, or the treatment/disinfectant equipment, if any, is not working properly.

If coliform bacteria are found in drinking water, the water system may need to take any number of corrective actions including flushing the system, repairing/upgrading system components, disinfecting the system, repairing treatment equipment and enacting source protection measures.

The routine bacteria sampling regimen is determined by the classification of the system, the population served, and the physical configuration of the system. Typically, a Community water system samples monthly, and a Non-Community water system samples quarterly. A water system that has had no monitoring/reporting violations or bacterial maximum contaminant level violations for a year, serves fewer than 1,000 people, does not use full-time chlorination, has no unresolved significant deficiencies stemming from its last sanitary survey, and has no item or activity in its sanitary protective radius that could potentially contaminate the water, is eligible for a reduction in sampling frequency.

States are to report the following categories of TCR violations (SDWIS Contaminant Code 3100):

**Acute MCL violation** (SDWIS Violation Code 21): Indicates that fecal coliform or Escherichia coli (“E.coli”), potentially harmful bacteria, were found to be “Present” in the system’s scheduled water sample, thereby violating the rule.

**Non-acute MCL violation** (SDWIS Violation Code 22): Indicates that total coliform bacteria were “Present” in the system’s scheduled water samples at a frequency that violates the rule. These are indicator bacteria and are not, generally, in themselves harmful.

**Major routine monitoring M/R violation** (SDWIS Violation Code 23): Indicates that a system did not submit any routine water samples during its scheduled monitoring period.

**Minor routine monitoring M/R violation** (SDWIS Violation Code 24): Indicates that a system submitted some, but not all, of the required routine samples.

**Major repeat monitoring M/R violation** (SDWIS Violation Code 25): Indicates that a system did not submit any required repeat samples.

**Minor repeat monitoring M/R violation** (SDWIS Violation Code 26): Indicates that a system submitted some, but not all, of the required repeat samples.

Under the Total Coliform Rule, whenever a water sample tests positive for total coliform bacteria, the sample must undergo further analysis to determine if fecal coliform or *E. coli* are present. Fecal coliform and *E. coli* bacteria are coliforms directly associated with feces. Discovery of a fecal coliform or *E. coli* will result in the immediate issuance of a “Boil Water Order” on the water system. The Boil Water Order will not be lifted until the system has been inspected to determine the source of the contamination, the necessary corrections have been made, and sufficient additional sampling has been conducted to indicate that the contamination has been eliminated. A water system will receive an “Acute MCL Violation” if a routine total coliform positive sample is followed by a fecal/*E. coli* positive repeat sample. Due to the direct threat to public health posed by the presence of fecal or *E. coli* bacteria, public notification is required as soon as possible, but no more than 24 hours after the discovery of the bacteria.

Systems that submit less than 40 samples in a sampling month are considered to comply with the TCR if no more than one sample submitted during the month is positive for total coliform. Systems submitting 40 or more samples are in compliance if no more than five percent of all samples are positive. Systems that exceed the above limits receive a “Standard MCL Violation” and are required to perform public notification. A total coliform positive sample requires the water system to submit repeat samples within 24 hours.

During 2015, 154 public water systems monitoring for TCR received 201 standard or acute bacteria MCL violations, as shown in the following graph. Note: A water system may be counted more than once if it has both standard and acute violations.

**COLIFORM BACTERIA MCL VIOLATIONS BY SYSTEM & VIO TYPE**

Of the water systems with such violations, eight served 500 or fewer people.

**COMMUNITY SYSTEMS WITH COLIFORM MCL VIOLATIONS (BY POPULATION)**

A system must demonstrate at least six months of bacteria sampling results without incurring an MCL violation before the DWGB will list the violation as having returned to compliance.

During 2015, 22 public water systems monitoring for TCR received 22 Major Routine or Major Repeat Monitoring/Reporting Violations (Violation Types 23 and 25), all serving 500 or fewer people. Generally, a system receiving a Monitoring/Reporting violation must sample according to schedule for six months before it is considered to have returned to compliance.

To see if prior year violations for any public water system have returned to compliance, please check our OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

**Revised Total Coliform Rule (RTCR)**

The RTCR establishes a maximum contaminant level for *E.coli* and uses *E.coli* and total coliforms to initiate a “find and fix” approach to address fecal contamination that could enter into the distribution system. It requires public water systems to perform assessments to identify sanitary defects and subsequently take action to correct them.

DWGB implemented the Revised Total Coliform Rule (RTCR) early in April of 2015. The rule was not implemented by EPA nation-wide until April 2016. New Hampshire has included the data in this year’s report and is provided in the Appendices.

States are to report the following categories of RTCR violations (SDWIS Contaminant Code 8000):

***E.coli* MCL violation** (SDWIS Violation Code 1A): Indicates (1) EC+ routine with insufficient repeat samples, or (2) a combination of EC+ and TC+ results between the routine and repeat samples, or (3) TC+ routine with TC+ repeat samples not tested for *E.coli* by lab.

**Level 1 Assessment/Assessment Form Treatment Technique violation** (SDWIS Violation Code 2A): Indicates (1) Failure to conduct L1 assessment or complete form, or (2) inadequate L1 assessment or insufficient content of assessment form.

**Level 2 Assessment/Assessment Form Treatment Technique** violation (SDWIS Violation Code 2B): Indicates (1) Failure to conduct L2 assessments or complete form, or (2) inadequate L2 assessment or insufficient content of assessment form, or (3) L2 Assessor not state-approved.

**Corrective Actions/Expedited Actions Treatment Technique** violation (SDWIS Violation Code 2C): Indicates (1) Failure to complete corrective actions within the required timeframe when a Level 1 or Level 2 assessment is triggered; (2) failure to comply with state-required expedited/additional actions when an *E.coli* MCL happens.

**Start-up Procedures Treatment Technique** violation (SDWIS Violation Code 2D): Indicates failure to complete seasonal system start-up procedures.

**Routine Monitoring** violation (SDWIS Violation Code 3A): Indicates (1) failure to collect routine samples at appropriate site/frequency; (2) failure to collect replacement samples when state or lab invalidates one or more routine samples.

**Additional Routine Monitoring** violation (SDWIS Violation Code 3B): Indicates failure to collect additional routine samples required the next month after any TC+ happens (only applicable when PWS's baseline RTCR monitoring frequency is not monthly).

**TC Samples (triggered by turbidity exceedance) Monitoring** violation (SDWIS Violation Code 3C): Indicates failure to collect required extra total coliform samples due to turbidity exceedance (only applicable to Subpart H systems avoiding filtration).

**Monitoring Violation due to Lab and/or Analytical Method Errors** (SDWIS Violation Code 3D): Indicates (1) failure to use the required/approved analytical methods, or to follow holding times, or sample preparation or collection methods; (2) failure to use certified and/or state-approved laboratory.

**Assessment Forms Reporting** violation (SDWIS Violation Code 4A): Indicates failure to timely submit a completed assessment form where the assessment and assessment form is complete and adequate, only the delivery of the form is late.

**Sample Results Reporting** violation (SDWIS Violation Code 4B): Indicates (1) failure to provide sample results information to the state; (2) failure to provide notification to the state that a monitoring violation happened.

**Certification Form (for Start-up Procedures) Reporting** violation (SDWIS Violation Code 4C): Indicates failure to provide the certificate that confirms seasonal system start-up procedures have been completed (start-up procedures were complete on time and adequate, only the delivery of the certificate is late).

**EC+ Notification Reporting** violation (SDWIS Violation Type 4D): Indicates failure to notify the state within 24 hours about an EC+ compliance sample result (applies to any PWS each time it has an EC+ result even if there is no *E.coli* MCL violation).

***E.coli* MCL Reporting** violation (SDWIS Violation Type 4E): Indicates failure to provide notification to the state that an *E.coli* MCL violation happened.

**Assessments, Assessment Forms, Corrective/Expedited Actions Reporting** violation (SDWIS Violation Type 4F): Indicates failure to provide notification to the state that violations related to Level 1 and 2 assessments, assessment forms, and corrective actions have happened.

**Errors with Sample Siting Plan** violation (SDWIS Violation Type 5A): Indicates failure to develop sample siting plan or to revise sample siting plan to include: (1) a sample collection schedule, and/or (2) sample sites or the SOP describing how the sample sites will be chosen.

**RTCR Recordkeeping** violation (SDWIS Violation Type 5B): Indicates (1) failure to keep records for Level 1 and Level 2 assessments and corrective/expedited actions for 5 years; (2) failure to keep records for one year on repeat sample results that the state approved and extended the timeframe for sample collection.

### **Ground Water Rule (GWR)**

EPA published the Ground Water Rule in the Federal Register on November 8, 2006. New Hampshire implemented the GWR in December 2009. The purpose of the rule is to provide for increased protection against microbial pathogens in public water systems that use ground water sources. EPA is particularly concerned about ground water systems that are susceptible to fecal contamination since disease-causing pathogens may be found in fecal contamination. The GWR applies to public water systems that serve ground water. The rule also applies to any system that mixes surface and ground water if the ground water is added directly to the distribution system.

The targeted, risk-based strategy addresses risks through an approach that relies on the four major components listed below:

- Periodic sanitary surveys of systems that require the evaluation of eight critical elements of a public water system and the identification of significant deficiencies (e.g., a well located near a leaking septic system).
- Triggered source water monitoring when a system (that does not already treat drinking water to remove 99.99 percent (4-log) of viruses) identifies a positive sample during its Total Coliform Rule monitoring.
- Corrective action is required for any system with a significant deficiency or source water fecal contamination.
- Compliance monitoring to ensure that treatment technology installed to treat drinking water reliably achieves 99.99 percent (4-log) inactivation or removal of viruses.

**Triggered Monitoring violation** (SDWIS Violation Code 34): Failure to collect triggered, source water samples within 24 hours of receiving notification of a total coliform positive sample, collected for routine compliance with the Total Coliform Rule.

There were 97 systems (11 “C” systems, 80 “N” systems, and six “P” systems) having 106 monitoring and reporting violations.

**Treatment Technique violation** (SDWIS Violation Code 41/Contaminant 0700): Failure to maintain 4-log treatment of viruses before or at the first customer for a groundwater source and failure to correct the deficiency within four hours of determining that the system is not maintaining at least 4-log treatment before or at the first customer.

There were no health-based violations for type 41/0700 violation.

**Treatment Technique violation** (SDWIS Violation Code 45): Failure to complete corrective action in accordance with a state-approved corrective action plan or non-compliance with a state-approved corrective action plan within 120 days of receiving written notice from the state of the deficiency.

There were 27 public water systems (13 “C” systems, nine “N” systems, and five “P” systems) having 28 treatment technique violations.

To see if prior year violations for any public water system have returned to compliance, please check the OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

#### **Disinfectants/Disinfection Byproducts Rule (D/DBPR Stage 1)**

The D/DBP rules apply to all surface and groundwater systems (and their consecutives) that use a chemical disinfectant (chlorine, chloramines, ozone, other). These systems are required to monitor for chlorine residuals and disinfection byproducts.

**Maximum Contaminant Level (MCL) violation** (SDWIS Violation Code 02): MCL violations occur when the sample exceeds the MCL.

There were four public water systems receiving 13 MCL violations.

**Monitoring and Reporting (M/R) violation** (SDWIS Violation Code 27): Failure to sample.

There were 11 public water systems receiving 23 M/R violations.

**Treatment Technique (TT) violation** (SDWIS Violation Code 46): Failure to remove Total Organic Compound (TOC).

There were no violations of this type for any public water systems.

DBP violations for 2015 are summarized below with details included in the Appendices.

To see if prior year violations for any public water system have returned to compliance, please check our OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

D/DBP1 Violations									
System Type	# Systems w/ MCL Violations	# MCL Violations (Vio Type 02)		# Systems w/ M/R Violations	# M/R Violations (Vio Type 27)			TT Violations (Vio Type 46)	MRDL Violations
		HAA5 (2456)	TTHM (2950)		HAA5 (2456)	TTHM (2950)	Chl.Resid. (0999)		
Surface Water	2	3	7	1	1	1	0	0	0
Ground Water	2	0	3	10	10	10	1	0	0
Totals	4	3	10	11	11	11	1	0	0

**Surface Water Treatment Rule (SWTR, IESWTR, LT1)**

The Surface Water Treatment Rule (SWTR) establishes standards for the treatment of surface water systems and ground water under the direct influence of surface water. Public water systems subject to the SWTR are required to provide filtration and disinfection to achieve minimum 3-log inactivation of *Giardia lamblia* and 4-log inactivation of viruses. In addition, under the Interim Enhanced Surface Water Treatment Rule (IESWTR) and the Long Term 1 Enhanced Surface Water Treatment Rule (LT1SWTR), all surface water systems using conventional filtration must achieve a minimum of 2-log removal of *Cryptosporidium*. Monthly operating reports submitted to the NHDES record daily monitoring for turbidity and free chlorine residual at the filtration plant, and monthly monitoring to confirm positive chlorine residual in the distribution system. Turbidity standards must be met in at least 95 percent of measurements taken each month, and chlorine residual in water entering the distribution system must be at least 0.2 mg/L. Failure to meet these or other SWTR standards results in a treatment technique violation).

New Hampshire has 56 water systems that derive at least some of their water from surface water. Of these, one system continues to retain its filtration waiver.

Violations of the SWTR (SDWIS Contaminant Code 0200) are reported for the following categories:

**Monitoring, routine/repeat M/R (for unfiltered systems)** (SDWIS Violation Code 31): Indicates a system’s failure to carry out required water tests, or to report the results of those tests.

**Monitoring, routine/repeat M/R (for filtered systems)** (SDWIS Violation Code 36): Indicates a system’s failure to carry out required water tests, or to report the results of those tests.

**Treatment techniques TT (for filtered systems)** (SDWIS Violation Code 41): Indicates a system’s failure to meet filtered water turbidity requirements.

**TT Failure (for unfiltered systems)** (SDWIS Violation Code 42): Indicates a system’s failure to comply with the SWTR requirement to install filtration or meet filtration waiver conditions.

To see if prior year violations for any public water system have returned to compliance, please check the OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx> .

## Chemical Monitoring

Water quality testing for chemical contaminants is much less frequent than for microbiological contaminants. Chronic exposure over a long period is usually necessary to experience a risk to health. Chemical monitoring includes: volatile organic compounds (aka VOCs, which are solvents and hydrocarbons), synthetic organic compounds (aka SOCs, which are pesticides and plastics), inorganic compounds (aka IOCs, which are nitrate, nitrite and metals) and radionuclides (aka RADs). Community systems, with the exception of systems that solely use purchased water, are required to sample for all of the above parameters under New Hampshire rules. Non-transient/Non-Community (“P”) water systems sample for all parameters above with the exception of RADs, which are required for initial water quality testing only. Transient/Non-Community (“N”) systems are required to sample for nitrates once a year and nitrites once every three years.

**Organic Contaminants:** These are carbon-based compounds, such as industrial solvents and pesticides, which include VOCs and SOCs. These contaminants generally get into water through runoff from cropland, releases from underground storage tanks, discharges from factories, or accidental spills. EPA has set legal limits on 54 organic contaminants that are to be reported [40 CFR 141.61].

**Inorganic Contaminants:** These are non-carbon-based compounds, such as metals, nitrates and asbestos, which generally are naturally-occurring in some water, but can also get into water through farming, chemical manufacturing, and other human activities. EPA has established MCLs for 15 inorganic contaminants [40 CFR 141.62].

**Radionuclides:** These are radioactive particles that can occur naturally in water or result from human activity. EPA has set legal limits on five types of radionuclides: radium-226 and radium-228, gross alpha, beta particle/photon radioactivity and Uranium [40 CFR 141.66]. Violations for these contaminants are reported using the following four categories:

**Gross alpha** (SDWIS Contaminant Code 4000): This is for alpha radiation above MCL of 15 picocuries/liter (pCi/L). Gross alpha includes radium-226 but excludes radon and uranium.

**Uranium** (SDWIS Contaminant Code 4006): Uranium mass above MCL of 30 micrograms per liter (ug/L).

**Combined radium-226 and radium-228** (SDWIS Contaminant Code 4010): Combined radiation from these two isotopes above MCL of 5 pCi/L.

**Gross beta** (SDWIS Contaminant Code 4101): Beta particle and photon radioactivity from man-made radionuclides above 4 millirem/year. This applies to systems serving populations greater than 100,000.

Two types of chemical monitoring violations are reported:

**Maximum Contaminant Level (MCL) violation** (SDWIS Violation Code 01 for single sample; SDWIS Violation Code 02 for average): MCL violations occur when the sample exceeds the MCL.

**Monitoring and Reporting (M/R) violation** (SDWIS Violation Code 03): Failure to sample.

In 2015, 32 public water systems incurred 67 MCL violations for regulated chemical contaminants. Numbers in this report may not match the Appendices because a water system may have incurred multiple violations for any given contaminant or violation type.

New Hampshire tracks chemical data by six contaminant “sample” groups. These contaminant groups are used for M/R violations unless an individual IOC exceeds half the MCL, or an individual VOC or SOC is detected. When one of these situations occurs, the individual contaminant is tracked.

The contaminant groups are listed in the following table:

NH Chemical Sample Groups		Sampling Rules
VOCs	Contains 21 regulated contaminants.	All new “C” and “P” systems sample quarterly the first year, annually thereafter; or, every 3 years with a waiver.
SOCs	Contains 25 regulated contaminants. NH has received waivers for 5 of the 30 regulated SOC based on state pesticide use records. See Appendix A. Two SOC contaminants are waived for surface water systems.	New “C” and “P” systems sample annually, or every 3 or 6 years with a waiver.
IOCs	Contains 11 regulated contaminants for “C” systems, and 10 for “P” systems (excludes Fluoride).	All “C” and “P” ground water systems must sample all Phase II/IIB and V IOCs every 3 years. All “C” and “P” systems using surface water must sample all Phase II/IIB and V IOCs annually. State rule requires “P” systems to sample for Fluoride.
RADs	Contains 3 regulated contaminants.	All new “C” systems sample quarterly, and future sampling requirements are based on the results of the quarterly samples for the first year.
Nitrates	(individual)	All systems must sample annually.
Nitrites	(individual)	All systems must sample every 3 years.

Group Contaminant Codes	Individual Contaminants	Systems with M/R Violations	Group M/R Violations	Individual M/R Violations
VOCs		5	21	105
Subtotal		5	21	105
SOCs		3	25	75
Subtotal		3	25	75
IOCs		-	-	-
	1005 Arsenic	6	0	6
	1040 Nitrate	8	0	9
Subtotal		14	-	15
RADs		-	-	-
	4000	2	-	2
	4006	1	-	1
	4010	1	-	1
Subtotal		2	-	4
<b>TOTALS</b>		<b>24</b>	<b>46</b>	<b>199</b>

There were 14 individual chemical Monitoring/Reporting violations incurred by 21 systems. DWGB issued five group VOC M/R violations to five water systems (four “C” systems, one “P” system). There were three water systems with group SOC M/R violations (one “C” system and two “P” systems). There were no water systems having group IOC M/R violations; however, six systems incurred six Arsenic M/R violations and eight systems incurring nine Nitrate M/R violations.

New Hampshire’s policy is to wait until subsequent required sampling, specifically make-up sampling, has been completed before determining that compliance has been achieved. Those systems outlined above with outstanding M/R violations have not been returned to compliance because they had not yet submitted all required chemical samples.

To see if prior year violations for any public water system have returned to compliance, please check our OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

**Lead and Copper Rule (LCR)**

This rule established national limits on lead and copper in drinking water [40 CFR 141.80-91]. Corrosion of lead and copper pipes and plumbing fixtures pose various health risks when the associated water is ingested, and can enter drinking water from household pipes and plumbing fixtures.

Lead contamination is a major concern today, especially when small children are involved. Sampling under this rule reflects this concern. The number of samples required is based on the system’s population. Systems that do not exceed action levels, 0.015 mg/l for lead and 1.3 mg/l for copper, will sample each site twice the first year, once a year for the next 3 years, and then once every 3 years. Systems that exceed action levels need to do corrosion control studies, possibly provide treatment, and do additional sampling.

Community (“C”) and Non-Transient/Non-Community (“P”) water systems are required to sample under this rule. Transient/Non-Community (“N”) water systems are exempt from the Lead and Copper Rule.

New Hampshire reports violations of the LCR (SDWIS Contaminant Code 5000) in the following categories:

**Initial lead and copper tap violation (Monitoring/Reporting)** (SDWIS Violation Code 51): Indicates that a system did not meet initial lead and copper testing requirements or failed to report the results of those tests to the state; or who incurred the initial tap monitoring violation prior to the calendar year M/R but failed to return to compliance prior to January 1. Systems failing to sample by January 1 of the following year continue to incur the violation until the required samples are taken.

**Follow-up or routine lead and copper tap M/R violation** (SDWIS Violation Code 52): Indicates that a system did not meet follow-up or routine lead and copper tap testing requirements or failed to report the results. As with the previous M/R violation, systems failing to sample by January 1 of the following year continue to incur the violation until the required samples are taken.

**Routine Water Quality M/R violation** (SDWIS Violation Code 53): Indicates that a system did not meet routine water quality testing requirements or failed to report the results. The violation continues until the system reports the next period sample results or until the system is optimized for corrosion control treatment.

**Treatment installation violation (Treatment Technique)** (SDWIS Violation Codes 57, and 58): Indicates a failure to install an optimal corrosion control treatment system (57) or optimize a source water treatment system (58) which would reduce lead and copper levels in water at the tap. (One number is to be reported for the sum of violations in these two categories.)

**Public education violation TT violation** (SDWIS Violation Code 65): Indicates that a system did not provide required public education about reducing or avoiding lead intake from water.

**Lead Consumer Notice M/R violation** (SDWIS Violation Code 66): Indicates a failure to provide notice of lead tap results to the individual tap(s) from where the sample was taken and/or failure to submit an example of this notice and a certification to the state 141.85(d)(1)-(4) and 141.90(f)(3).

Nine systems incurred nine routine or follow-up violations (Vio Type 52) for lead and copper in 2015. There were five water systems having five violations (Vio Type 53), and there were three water systems receiving three violations (Vio Type 66).

To see if prior year violations for any public water system have returned to compliance, please check the OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

**SYSTEMS WITH LEAD & COPPER VIOLATIONS IN 2015 BY SYSTEM TYPE**

**Consumer Confidence Report Rule (CCR)**

All active Community water systems are required to deliver to their customers a brief annual water quality report. This report is to include educational materials and provide information on the public water system source water, the levels of any detected contaminants, and compliance with drinking water regulations. In addition, reports are to be submitted to the primacy agency. Any “C” system failing to complete the CCR requirements will incur the following violation:

**Significant Consumer Notification violation** (SDWIS Violation Code 71, Contaminant Code 7000): Any Community water system that completely fails to provide the consumer confidence report during the calendar year.

New Hampshire received interim primacy for the CCR, which gave NHDES enforcement authority for violations incurred from 2002 forward. There were 30 systems incurring violations in 2015.

To see if prior year violations for any public water system have returned to compliance, please check the OneStop website at <http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

**DWGB COMPLIANCE ASSISTANCE AND ENFORCEMENT ACTIVITIES**

DWGB uses a variety of means to assist PWSs to maintain compliance with applicable SDWA and state regulations. The compliance assistance activities include the following: making sampling schedules and analysis forms available over the Internet, emailing reminder postcards, offering regular operator training courses and special topic seminars, emailing the DWGB’s newsletter to approximately 4,000 stakeholders, offering fact sheets on a wide variety of subjects, and providing technical assistance over the phone as well as during sanitary surveys.

Should a system fail to monitor according to schedule, exceed a Maximum Contaminant Level, violate a treatment technique, fail to perform public notice, or fail to correct a significant deficiency identified in a sanitary survey, the system is issued a Notice of Violation (NOV). In the majority of cases, an NOV is likely to prompt system representatives to bring their water system back into compliance. In a small

number of cases, additional enforcement action is required. If the violation is not resolved or additional violations are accrued, a Letter of Deficiency (LOD) is issued. The LOD requests that certain actions be completed within specified time periods. The LOD seeks voluntary compliance from the system owners and it is not independently enforceable. More serious violations or repetitive violations may result in the issuance of an Administrative Order (AO), Administrative Order by Consent (AOC) and/or the imposition of Administrative Fines. On rare occasions, it has been necessary to refer a water system to the NEW HAMPSHIRE Attorney General’s office for civil and/or criminal penalties.

Because New Hampshire rules specify that sampling be conducted in the month or quarter specified in the Master Sampling Schedule, NOV letters are sent out as soon as each month/quarter is complete. Systems that fail to sample during the assigned period are sent the NOV letter and make-up sampling is required as soon as possible. This provides for a more equitable enforcement response to all systems, regardless of month/quarter assigned, promotes compliance by establishing NHDES’ oversight capabilities, and allows NHDES to better balance the processing of enforcement actions throughout the year. The NHDES Drinking Water program is very comprehensive. The various sections work closely with one another and all use the same database. The programs have enhanced compliance in the state by providing additional outreach efforts.

**Sanitary Surveys**

NHDES staff conducts sanitary surveys or water system inspections every three years for “C” and “P” systems, and every five years for “N” systems. The water systems are inspected for compliance with drinking water program regulations. Any necessary water quality samples can also be taken during the survey. Surveys are one of the best ways of ensuring proper protection of drinking water supplies and the proper operation of public water systems. Periodic visits to the water systems allow the DWGB staff to update its data and gather other information on the water system that is required under federal and state regulation. All new systems are surveyed as they come on-line. DWGB staff conducted 800 sanitary surveys in 2015. In addition, there were 560 site visits consisting of 63 site investigations, 65 technical assistance visits, 15 boil order responses, five visits related to managerial/financial assistance or capacity development, 294 site visits for Level 1 and Level 2 Assessments (new in 2015), and 118 various other site visits such as inspections of new treatment installations or in support of other Bureau programs.

## **Operator Certification Program**

New Hampshire requires that all “C” and “P” public water system types have a certified operator. These operators oversee many system operations to ensure a safe and adequate water supply to the system’s customers. There are two categories of certification (treatment and distribution) and each category is divided into five levels of complexity. Each level has its own strict experience and education requirements, and applicants must pass a certification exam with a grade of at least 70% to become certified. NHDES sponsors classes and seminars, and requires certified operators to maintain continued education units (CEUs). As of December 31, 2015, there were 1,084 active water system operators licensed in New Hampshire.

## **CONCLUSIONS**

In general, New Hampshire tends to have a higher number of MCL occurrences than other states. Unlike most other states and territories, New Hampshire has Administrative Rule, Env-Dw 719.02, which requires the owner of a PWS to enter into a written agreement with an accredited laboratory to perform duties related to reporting drinking water quality analyses. The agreement must contain the provision that the lab reports all analytical results directly to DWGB, the primacy agency. In most states and territories, the PWS submits water quality results from an accredited lab to the primacy agency. The primacy agency and federal government may never know of an MCL occurrence in these situations since the PWS may opt to resample or incur a monitoring violation rather than receive an MCL violation. New Hampshire public water systems do not have this option. The intent of this rule was to protect consumer health from risks that could be caused by systems manipulating the submission of sampling data.

The majority of PWS violations that occurred in New Hampshire in 2015 were due to failure to monitor. While these violations are of concern, they are generally considered secondary to violations that more directly affect public health, such as violations occurring from exceeding a maximum contamination level. DWGB believes that modifications to enforcement strategies have reduced the overall number of violations as enforcement presence is better recognized. Sampling schedules and analysis forms are available over the Internet making it easier for systems to comply.

When a system addresses its violations, it returns to compliance (RTC). The time it takes a New Hampshire water system to achieve RTC status varies depending upon the nature of the underlying violation. For example, a PWS receiving a treatment technique (TT) violation under the Surface Water Treatment Rule may achieve RTC status in a month, but it may take a seasonal PWS up to a year to achieve RTC status following a Total Coliform Rule Monitoring/Reporting violation.

## **REPORT AVAILABILITY AND CONTACT INFORMATION**

Questions regarding this report may be submitted by contacting us at:

New Hampshire Dept. of Environmental Services  
Water Division - DWGB  
PO Box 95  
Concord, NH 03302-0095  
(603) 271-2513  
[dwgbinfo@des.nh.gov](mailto:dwgbinfo@des.nh.gov)

This report will be available on the NHDES website:

[http://des.nh.gov/organization/divisions/water/dwgb/annual\\_report.htm](http://des.nh.gov/organization/divisions/water/dwgb/annual_report.htm).

The status of all violations (and more) can be found at the NHDES OneStop link:

<http://www2.des.state.nh.us/DESONestop/BasicSearch.aspx>.

## Definitions for Violations Table

The following definitions apply to the Summary of Violations table:

**Filtered Systems:** Water systems that have installed filtration treatment [40 CFR 141, Subpart H].

**Inorganic Contaminants:** Non-carbon-based compounds such as metals, nitrates, and asbestos. These contaminants are naturally-occurring in some water, but can get into water through farming, chemical manufacturing, and other human activities. EPA has established MCLs for 15 inorganic contaminants [40 CFR 141.62].

**Lead and Copper Rule:** This rule established national limits on lead and copper in drinking water [40 CFR 141.80-91]. Lead and copper corrosion pose various health risks when ingested at any level, and can enter drinking water from household pipes and plumbing fixtures. States report violations of the Lead and Copper Rule in the following four categories:

Initial lead and copper tap M/R (SDWIS Vio Code 51) indicates that a system did not meet initial lead and copper testing requirements, or failed to report the results of those tests to the State.

Follow-up or routine lead and copper tap M/R (SDWIS Vio Code 52) indicates that a system did not meet follow-up or routine lead and copper tap testing requirements, or failed to report the results.

Treatment installation (SDWIS Vio Codes 58 and 62) indicate a failure to install optimal corrosion control treatment system (58) or source water treatment system (62) which would reduce lead and copper levels in water at the tap. [One number is to be reported for the sum of violations in these two categories].

Public education (SDWIS Vio Code 65) shows that a system did not provide required public education about reducing or avoiding lead intake from water.

**Maximum Contaminant Level (MCL):** The highest amount of a contaminant that EPA allows in drinking water. MCLs ensure that drinking water does not pose either a short-term or long-term health risk. MCLs are defined in milligrams per liter (parts per million) unless otherwise specified.

**Monitoring:** EPA specifies which water testing methods the water systems must use, and sets schedules for the frequency of testing. A water system that does not follow EPA's schedule or methodology is in violation [40 CFR 141]. States must report monitoring violations that are significant as determined by the EPA Administrator and in consultation with the States. For purposes of this report, significant monitoring violations are major violations and they occur when no samples are taken or no results are reported during a compliance period. A major monitoring violation for the surface water treatment rule occurs when at least 90% of the required samples are not taken or results are not reported during the compliance period.

**Organic Contaminants:** Carbon-based compounds, such as industrial solvents and pesticides. These contaminants generally get into water through runoff from cropland or discharge from factories. EPA has set legal limits on 54 organic contaminants that are to be reported [40 CFR 141.61].

**Radionuclides:** Radioactive particles can occur naturally in water or result from human activity. EPA has set legal limits on four types of radionuclides: radium-226 and radium-228, gross alpha, gross beta particle/photon radioactivity [40 CFR 141], and uranium. Violations for these contaminants are to be reported using the following four categories:

Gross alpha: SDWIS Contaminant Code 4000 for alpha radiation above MCL of 15 picocuries/liter. Gross alpha includes radium-226 but excludes radon and uranium. New Hampshire's term for this is compliance gross alpha.

Uranium: SDWIS Contaminant Code 4006 for uranium mass above MCL of 30 ug/l.

Combined radium-226 and radium-228: SDWIS Contaminant Code 4010 for combined radiation from these two isotopes above MCL of 5 pCi/L.

Gross beta: SDWIS Contaminant Code 4101 for beta particle and photon radioactivity from man-made radionuclides above 4 millirem/year.

**Reporting Interval:** The reporting interval is a calendar year from January through December.

**SDWIS Codes:** Specific numeric codes from the Safe Drinking Water Information System (SDWIS) have been assigned to each violation type included in this report. The violations to be reported include exceeding contaminant MCLs, failure to comply with treatment requirements, and failure to meet monitoring and reporting requirements. Four-digit SDWIS Contaminant Codes have also been included in the chart for specific MCL contaminants.

## Definitions for Violations Table

---

**Surface Water Treatment Rule (SWTR):** The Surface Water Treatment Rule establishes criteria under which water systems supplied by surface water sources, or ground water sources under the direct influence of surface water, must filter and disinfect their water [40 CFR 141, Subpart H]. Violations are to be reported for the following four categories:

Monitoring, routine/repeat (unfiltered systems) -- SDWIS Vio Code 31 indicates a system's failure to carry out required water tests, or to report the results of those tests.

Monitoring, routine/repeat (filtered systems) -- SDWIS Vio Code 36 indicates a system's failure to carry out required tests, or to report the results of those tests.

Treatment techniques (filtered systems) -- SDWIS Vio Code 41 shows a system's failure to properly treat its water.

Failure to filter (unfiltered systems) -- SDWIS Vio Code 42 shows a system's failure to properly treat its water. Data for this violation code will be supplied to the States by EPA.

**Total Coliform Rule (TCR):** The Total Coliform Rule establishes regulations for microbiological contaminants in drinking water. These contaminants can cause short-term health problems. If no samples are collected during the one-month compliance period, a significant monitoring violation occurs. States are to report the following four categories of violations:

Acute MCL violation (SDWIS Vio Code 21) indicates that the system found fecal coliform or E. coli, potentially harmful bacteria, in its water, thereby violating the rule.

Non-acute MCL violation (SDWIS Vio Code 22) indicates that the system found total coliform in samples of its water at a frequency or at a level that violates the rule. For systems collecting fewer than 40 samples per month, more than one positive sample for total coliform is a violation. For systems collecting 40 or more samples per month, more than 5% of the samples positive for total coliform is a violation.

Major routine and follow-up monitoring (SDWIS Vio Codes 23 and 25) show that a system did not perform any monitoring. [One number is to be reported for the sum of violations in these two categories.]

Sanitary Survey (SDWIS Vio Code 28) indicates a major monitoring violation if a system fails to collect 5 routine monthly samples if sanitary survey is not performed.

**Treatment Techniques:** A water disinfection process that EPA requires instead of an MCL for contaminants that laboratories cannot adequately measure. Failure to meet other operational and system requirements under the Surface Water Treatment and the Lead and Copper Rules have also been included in this category of violation for purposes of this report.

**Unfiltered Systems:** Water systems that do not need to filter their water before disinfecting it because the source is very clean [40 CFR, Subpart H].

**Violation:** A failure to meet any state or federal drinking water regulation.
