

EMERGENCY SUCTION ENTRAPMENT RELEASE PROCEDURE

1A. Supply fresh breathing air to the victim by whatever means are necessary or available, mouth to mouth, upside down 5 gallon bucket, snorkel, whatever need be done.

1B. SHUT OFF ALL PUMPS IMMEDIATELY!!!

(focus on #2: The most effective act: break the vacuum in the system, in some cases, shutting off the pump will not release the child !!!)

2. BREAK SYSTEM VACUUM, OPEN PUMP LIDS!!! In some cases, shutting off the pump will not release the child !!!

3. IF YOU CANNOT OPEN PUMP LID(S)...HIT and BREAK THE PIPES GOING INTO THE FRONT OF THE PUMP(S) WITH; HAMMER, AX, SHOVEL, METAL PIPE, ROCK....BREAK THE PIPE... BREAK the VACUUM!!!

4. IF ABOVE IS NOT EFFECTIVE; LUBRICATE THE DIGIT, OR LIMB WITH A COATING OF PETROLEUM/SILICONE BASED JELLY OR COMMON "BUTTER", SUN TAN LOTION OR ANY AVAILABLE LUBRICANT.

THE MAIN OBJECTIVE IS TO "BREAK THE VACUUM IN THE PIPES/RELEASE THE CHILD"!!!
SHUTTING OFF THE PUMP MAY NOT RELEASE THE CHILD !!

!!URGENT!!...BREAK THE VACUUM IN THE PIPES: RELEASE THE CHILD

In some cases, shutting off the pump will not release the child!!!

NOTE: Please carry a small charged scuba tank with regulator on the truck for such occasions.
