Newington Station is a fossil fuel-fired electricity generating facility, owned and operated by GSP Newington LLC, a wholly owned subsidiary of Granite Shore Power LLC. The facility is comprised of one utility boiler firing primarily No. 6 fuel oil and also capable of burning natural gas and crude oil, two auxiliary boilers burning No. 2 fuel oil or diesel, and an emergency generator. Newington Station emits nitrogen oxides (NO_x), sulfur dioxide (SO₂), carbon monoxide (CO), volatile organic compounds, particulate matter, and hazardous air pollutants. The utility boiler stack is equipped with a continuous emissions monitoring system for NO_x, SO₂, CO, and carbon dioxide (diluent gas) and a continuous opacity monitoring system. Newington Station operates control equipment, including electrostatic precipitators to control particulate matter, and has implemented operational changes, such as burner modifications and overfire air, to reduce NO_x emissions.

Newington Station is an affected source under the Federal Acid Rain Program. Pursuant to 40 Code of Federal Regulations (CFR) Part 73.10(b), Newington Station is allocated SO₂ allowances as indicated in the table below:
