Program: TESTING AND MONITORING (Current)

Description: This section is primarily responsible for implementation of two air functions; a) the stationary source stack testing program; and b) the stationary source continuous emissions monitoring (CEM) program. The compliance stack testing effort oversees all emissions testing required by the state or EPA and involves reviewing pretest protocols, participating in the pretest meetings, witnessing/coordinating the actual stack testing in the field and technically reviewing the final report for state acceptance of the data. For those large stationary sources required to continuously monitor emissions, the CEM program involves overseeing the quarterly audits performed on the CEM systems to ensure accuracy of the monitors, witnessing the annual relative accuracy stack-testing audits conducted on each system, and reviewing the quarterly CEM excess emissions reports for compliance with the facility's emissions limits.

**Program: AIR TOXICS MANAGEMENT PROGRAM (Current)**

Description: This program is designed to protect public health by preventing, controlling, abating and limiting emissions of toxic air pollutants into the ambient air pursuant to RSA 125-I and Section 112 of the 1990 Clean Air Act Amendments. The Air Toxics Program is responsible for the implementation of the State Air Toxics Control Program codified in Env-A 1400 and sets Ambient Air Limits (AALs) or air quality standards for approximately 750 compounds. Sources that emit any of these regulated compounds are required to demonstrate compliance with the AALs. The SSMB is responsible for implementing ENV-A 1400 including determining applicable sources, identification of compliance options and approving permit conditions for subject sources. This program is also responsible for implementation of the federal Maximum Achievable Control Technology (MACT) Program for NH sources, conducting ambient air toxics monitoring at sites throughout NH, and providing department-wide assistance on issues involving environmental impacts on public health.

**Div/Bur:** AIR RESOURCES DIVISION  
**Permitting & Environmental Health**

**Activity:** Evaluate and Implement Programs to Address Current Air Toxics and Public Health Concerns (Current)

Description: Air pollutants and toxic chemicals in the environment often have public health implications. The Air Toxics Management Program is often responsible for evaluating and addressing the public health impacts of toxic air contaminants.

**Activity:** Implement Federal Air Toxics Control Program in NH (Current)

Description: The US EPA has established a federal air toxics control program under Section 112 of the 1990 Clean Air Act Amendments. The program sets maximum achievable control technology (MACT) standards for designated source categories that must be implemented by affected sources under the Title V operating permit program. DES has been delegated by EPA to implement these MACT standards. The Air Toxics Management Program is responsible for providing input and comments to EPA on proposed MACT standards, tracking completed MACT standards, and assuring that affected NH sources are identified and implement applicable MACT standards as part of the Title V permit process.

**Activity:** Implement State Air Toxics Control Program (Current)

Description: DES has adopted a new air toxics control program under RSA 125-I which became effective for all NH sources as of May 8, 2001. This program, codified under Env-A 1400, sets health risk-based ambient air limits (AALs) for each of over 750 regulated toxic air pollutants (RTAPs). Any NH source that emits an RTAP must demonstrate that its emissions will not result in an exceedance of the AAL. The Air Toxics Management Program is responsible for working with the NH DES Environmental Health Risk Assessment section to update the list of RTAPs each year based on recent health risk assessment data and for providing information, assistance and implementation policy recommendations to affected sources as well as DES permitting activities.

**Program: AIR MONITORING (Current)**

Description: The Ambient Air Monitoring Unit is responsible for operation and maintenance of New Hampshire's ambient air monitoring network. New Hampshire operates several remote facilities around the state, at which DES monitors for criteria air pollutants as prescribed by the US EPA, including sulfur dioxide, ozone, nitrogen oxides, particulate matter, volatile organic compounds, and mercury. The data collected at these sites is used to determine air quality status, confirmation of air quality trends and predictions for the Northeast region, and to provide the basis for future policy planning. This data is transmitted into a federal database for both local and national use. The Ambient Air Monitoring Unit also provides assistance with data collection and analysis for special studies related to ambient air quality.

The Clean Air Act Amendments of 1990 recognized the merit of using market-based approaches to help achieve clean air goals. For example, the Amendments introduced a market-based allowance trading system for controlling sulfur dioxide emissions that contribute to acid rain. Reductions are achieved through an "emissions budget" or "cap" trading system that places a "cap" on emissions for a specific category of sources, power plants. In contrast, an open market system allows, but does not require, any emissions source or facility, including mobile sources, to participate and does not set a limit on the number of emissions reductions credits generated or sold. DES has both types of trading programs, which are managed by a single Program Manager. The programs achieve reductions in emissions that contribute to ground level ozone.

New Hampshire rules (Env-A 2900) were adopted to implement New Hampshire's Clean Power Act, which became law on July 1, 2002. The Act calls for annual reductions of multiple pollutants (SO2, NOx, and CO2) beginning in 2007 implemented through cap and trading programs. The Act differs from, but was based upon, DES's Clean Power Strategy. Trades are recorded in the NH Clean Power Act Allowances Tracking System. The Act also provides incentives for emissions reductions, and power plants could earn bonus allowances in various ways for various pollutants. The Clean Power Act was amended in 2006 to incorporate provisions for mercury reductions. While mercury trading is prohibited, provisions were added to allow mercury credits to be converted to sulfur dioxide allowances and used for compliance with the above trading program.

The DER Trading Program (Env-A 3100) is an open market system of trading. DERs are mass-based units (1 DER = 1 ton) representing discrete, retrospective emission reductions. DERs can be voluntarily generated by stationary, mobile, or area (e.g., off-road equipment, consumer products) sources. NOx and VOCs are included because New Hampshire is in the Ozone Transport Region. The DER Trading Program is intended to give RACT sources and sources subject to New Source Review (NSR) compliance flexibility and the opportunity to reduce compliance costs. Although it is not an attainment strategy, the program benefits the environment by requiring that 10 percent of all credits are retired (discounted) before they are used.

The ERC Trading Program (Env-A 3000) is also an open market system of trading. ERCs are rate-based units (1 ERC = 1 ton/year) representing continuous, permanent emission reductions. ERCs can be voluntarily generated by stationary, mobile, or area (e.g., off-road equipment, consumer products) sources. NOx and VOCs are included because New Hampshire is in the Ozone Transport Region. The ERC Trading Program is not intended to reduce emissions (for example, it is not an attainment strategy) but rather to give RACT sources and sources subject to New Source Review (NSR) compliance flexibility and the opportunity to reduce compliance costs. There is also an
### Activity: Emissions Reductions Credit (ERC) Trading Program (Current)

Economic development aspect: shutdown credits can only be used by the generator (they can not be traded). If the generator cannot use them, they become "public ERCs" in a state-controlled account. The state can then use these ERCs for purposes of job retention (highest priority), economic development, and job creation.

### Activity: Implement RGGI (Regional Greenhouse Gas Initiative) (Current)

The NOx Budget Trading Program (Env-A 3200) implements the Ozone Transport Commission Memorandum of Understanding (OTC MOU), which was signed on September 27, 1994 and called for regional NOx reductions beginning in 1999 implemented through a market-based budget (or cap) and trading program. Not only is NH's NOx Budget Trading Program designed to achieve the ozone season NOx reductions required by the OTC MOU, but also it is designed to achieve at least an additional 100 tons of NOx reductions per season for environmental benefit. By May 1, 1999, the currently existing affected facilities (utility boilers and combustion turbines at 5 Public Service of New Hampshire (PSNH) facilities) in New Hampshire shall reduce their NOx emissions from their 1990 baseline emissions of 14,589 tons to 4,674 tons. These significant NOx emission reductions, combined with similar reductions in other OTR States, should help improve air quality by reducing ground-level ozone concentrations. Exposure to ozone causes decreased lung capacity, particularly in children and elderly.

Program: PETROLEUM REIMBURSEMENT FUNDS AND CONTAMINATION NOTIFICATION PROGRAM (Current)

Description: The Petroleum Reimbursement Funds (Funds) include four separate funds: Oil Discharge and Disposal Cleanup Fund (ODDCF), Fuel Oil Discharge Cleanup Fund, Motor Oil Discharge Cleanup Fund and Gasoline Remediation & Elimination of Ethers Fund. These Funds are managed by DES for the Oil Fund Disbursement Board, which is authorized to adopt rules and distribute reimbursements. These Funds provide financial responsibility (i.e., insurance) to specific sectors of the petroleum industry, and provides monies for clean up of gasoline ether contamination, e.g., MTBE. Each Fund is supported by fees on specific types of imported petroleum products including motor fuels, heating oils and motor oil. The ODDCF is available to owners of regulated motor fuel USTs to address federal financial responsibility requirements. About $12 million per year is reimbursed to clean up petroleum contaminated sites.

Under the groundwater contamination Notification Program, DES notifies owners of properties with on-site water supply wells when contamination is detected in groundwater at nearby locations. All property owners within 500 feet of a (confirmed) groundwater contamination detection location receive notification by certified mail.

The State Petroleum Remediation Program investigates and remediates petroleum spills at sites which are not covered by the federally-regulated Underground Storage Tank (UST) program. These sites consist of heating oil USTs, petroleum Aboveground Storage Tanks (AST) and in-land oil spills not associated with storage facilities (spills from petroleum tanker trucks, etc.). Funding for this program is provided through the Petroleum Reimbursement Funds, the Oil Pollution Control Fund and responsible parties. The sites in the State Petroleum Remediation Program require active project management and Groundwater Management Permit oversight to ensure that sites move from discovery to cleanup and closure in a timely and cost-effective way.

There are 23 screens to be updated. The second is DWGB Login Samples, online data entry screens used by Accredited Labs to submit samples electronically to DWGB. This application is exempted from the standardization because it was developed for out-of-house users with their input, and much time and effort was spent to train the community of users.

**Program: INDUSTRIAL PRETREATMENT PROGRAM (Current)**

Description: This Program is responsible for preventing the discharge of any industrial wastewater into a municipal sewer system which would impact the successful operation of the wastewater treatment facility, create a health problem to personnel involved in the collection and treatment of the wastewater, adversely impact the sludge generated from the treatment process, and cause the treatment facility to violate its state/federal permit. To accomplish this goal, all industries which are proposing to discharge to a municipal wastewater treatment facility are required to get an indirect discharge permit from the municipality. These permits must be reviewed and approved before the municipality can issue the permit. The Program works closely with the municipality to ensure that they have the authority to issue appropriate permits to the industry.

Description: As the State has not been delegated the federal permit program, called the National Pollutant Discharge Elimination System (NPDES), EPA is responsible for developing and issuing NPDES permits for any facility which discharges pollutants to a surface water. However, before EPA can issue the permit, the state has to certify that this permit does not violate any state rule or regulation. To accomplish this, staff review the federally drafted permit, and work closely with EPA to make any necessary changes to the permit before it is issued. Once this permit is issued, it is adopted as a state permit.

#### Program: OPERATIONS PROGRAM (Current)

**Description:** The Operations Program is responsible for the training and certification of the over 480 wastewater treatment plant operators in the state. The program has a comprehensive Wastewater Operator Training Program, offering 30-35 classes each year, most of which are held at the training center located on the grounds of the State-run Winnipesaukee River Basin water pollution control facility in Franklin. In addition, this Program gets involved with keeping an eye on the 100 plus publicly owned wastewater systems in the state, and when requested, offer troubleshooting and problem solving assistance. The principal aim of this program is to prevent wastewater treatment systems from going out of compliance by becoming aware of problems early and assisting the operator in solving them. In this way, we can keep formal enforcement to a minimum.

**Start/End Dates:** 10/01/1999 thru 03 06 04

**Program: TMDL STUDIES (Current)**

Description: A Total Maximum Daily Load (TMDL) study specifies the maximum amount of pollutant that a waterbody can receive and still meet water quality standards and allocates pollutant loadings among point and nonpoint pollutant sources. Section 303(d) of the Clean Water Act (CWA) requires states to periodically develop a list of impaired waters (i.e., the "303(d) list"). A TMDL study must be done for all waters on the 303(d) List that are impaired by pollutants. This program includes all activities associated with the development of TMDLs.

**Start/End Dates: 10/01/2003 thru 09/30/2002**

### Activity: EPA Acid River (EPAAR) TMDLs (Current)

**Description:**
- FY12 EPA P&C #82
- FY11 EPA P&C # 121. Potential for 695 TMDLs based on the 2010 303(d) list
- FY08 EPA P&C # 104. DES has submitted a request for EPA Contractor Assistance with developing TMDLs for rivers listed as impaired due to low pH (i.e., acid rivers). Based on the 2006 303(d) List, NH currently has approximately 397 river segments that are impaired due to low pH and approximately 34 that are listed for aluminum, which is believed to be a result of the low pH.
- The first request is for developing a defensible methodology for preparing acid river TMDLs as well as a method for determining rivers which have low pH due to natural conditions. Assuming these methodologies are successfully completed, and if funding is available, DES plans to submit a future request for EPA Contractor assistance to prepare the Acid River TMDLs. This Activity assumes that EPA approves our request(s) for Contractor assistance.

### Activity: EPA Acid Pond (EPAAP) TMDLs (Current)

**Description:**
- FY09 EPA P&C # 107 - DELETED END DATE TO ALLOW MORE DELIVERABLES IN FUTURE UNDER THIS ACTIVITY: 2007 PPA Priority 88: "Commit to completion of an additional number of TMDLs for FY07, and provide a tentative list of waterbodies involved (future substitutions allowed)."
- 2007 PPA Priority 90: "Suggested TMDL commitment target range for FY07: 47-91".
- DES has submitted a request for EPA Contractor Assistance to prepare acid pond TMDLs for approximately 266 lakes listed as impaired on the 2006 303(d) List. This assumes that the existing data is sufficient for TMDL calculations. In addition, the Contractor is also to prepare a methodology for linking pH with aluminum violations. If successful, it may be possible to get credit for an additional 22 TMDLs for aluminum. Therefore, the total possible number of TMDLs from this effort could be 266 (pH) + 22 (Al) = 288 TMDLs. This Activity assumes EPA will approve the request for Contractor Assistance.

- 2007 PPA Priority 90: "Suggested TMDL commitment target range for FY07: 47-91".
- DES has submitted a request for EPA Contractor Assistance to prepare 30 lake total phosphorus TMDLs similar to the method used by the State of Maine. This Activity assumes EPA will approve the request for Contractor Assistance.

Activity: Great Bay Nitrogen WLA AND LA (Current)

**Deliverable:** Coordinated N Monitoring Program/Assessments for the Great Bay Estuary

Description: 7/9/11: END DATE EXTENDED FROM 9/30/11 TO 9/30/12. The existing monitoring programs for the Great Bay Estuary are inadequate to determine compliance with the numeric nutrient criteria. In order to document progress and ultimate success, a comprehensive monitoring program for nitrogen discharges, water quality, and eelgrass habitat is needed. This monitoring program will require funding and participation from EPA, NHDES, MEDEP, municipalities, PREP, GBNERR, WNERR, and UNH. Data from DES and its partners will be quality assured and analyzed to make assessments of nitrogen-related impairments and to quantify nitrogen sources. Outputs include coordination of meetings with partners, Quality Assurance Project Plan for coordinated nutrient monitoring in the Piscataqua Region watersheds, quality assured data on nitrogen and other eutrophication parameters in the Piscataqua Region watersheds.

**Deliverable:** Selection of N Model for Lower Piscataqua River

Description: 7/9/11: END DATE EXTENDED FROM 9/30/11 TO 9/30/12. The NHDES watershed nitrogen loading model could not be used for the Lower Piscataqua River, Portsmouth Harbor, and Little Harbor. The salinity in these areas was too similar to the salinity of the ocean for this model to be accurate. Therefore, the model only considered nitrogen discharges in these areas as they might affect conditions in Little Bay and the Upper Piscataqua River. A more detailed model is needed to determine the effects of nitrogen discharges on local conditions in the Lower Piscataqua River, Portsmouth Harbor, and Little Harbor. This model can also be used to refine assumptions regarding the percentage of loads from wastewater treatment facilities to the Lower Piscataqua River which ultimately reaches Little Bay and the Upper Piscataqua River. The available funding is not enough for DES to develop a model. However, local municipalities are interested in funding a model and DES will need to be involved with this process to ensure that the model is acceptable. Staff from multiple programs in DES (Shellfish, Wastewater Engineering, and Watershed Management) will need to be involved with the model development. Outputs include planning meetings with partners, comments on modeling options and on the water quality model of the Lower Piscataqua River.

Activity: LI Sound TMDL - CT River N Reduction (Current)

FY10 EPA P&C # 111: Connecticut and New York have completed a TMDL to address low dissolved oxygen in Long Island Sound. Part of the recommended solution is to reduce nitrogen in the Connecticut River which implies that nutrient reductions may be necessary from MA, VT and NH. EPA/NEIWPCC are coordinating efforts to help determine what the load reductions should be. The USGS SPARROW model may be used for this purpose.

Start/End Dates: 10/01/2002 thru 09/30/2012
Lead Person: COMSTOCK, W. GREGG

Deliverable: LISTMDL/Technical Assistance

Description: Includes participation in conference calls, meetings, review of documents related to the CT River Nitrogen Study which is part of the LI Sound TMDL. Number of technical assistance is estimated and is variable from year to year.

Activity: Merrimack/Pemigewasset R TMDL - ACOE (Current)

Description: FY12 EPA P&C #82,
FY11 EPA P&C # 120
The 2004 305(b)/303(d) surface water quality assessment indicated dissolved oxygen violations along the Merrimack and Pemigewasset Rivers. Data also indicates rising levels of phosphorus and algae in the downstream sections. A TMDL for dissolved oxygen is necessary to determine load allocations for point source and nonpoint sources as well as permit limits for NPDES permittees. It is expected that DES will partner with the ACOE to conduct a DO/Nutrient TMDL for the river. This work would be an extension of the Merrimack River Assessment Study which focused on bacteria for the CSO communities but did address other parameters as well.

#### Activity: VLAP Sampling (Current)

DES Biologists train volunteer monitors how to sample to quality of lakes and their associated tributaries. Lake deep spots are typically sampled for conductivity, turbidity, pH, acid neutralizing capacity, chlorophyll, total phosphorous, and transparency. Lake nearshore areas and tributaries are typically sampled for conductivity, turbidity, pH, and total phosphorus. Some lakes and tributaries are also sampled for E.coli and chloride.

Volunteer monitors will be rated on their sampling performance. The Limnology Center and Satellite labs will provide sampling equipment and laboratory capability to allow the volunteer monitors to sample at other times during the summer on their own. During this sampling, volunteers will complete a self-audit form to ensure they are following the proper sampling procedures.

Wetlands Program (Current)
Description: The Wetlands Bureau regulates dredge, fill, and construction of structures in or adjacent to surface waters, wetlands, sand dunes, and in areas within 100 feet of the highest observable tideline. Bureau activities include permitting, outreach, and compliance in accordance with the authority of RSA 482-A. The Bureau has worked closely with the US Army Corps of Engineers, and since 1992 nearly all permits issued by the bureau have become Federal USC Title 33, Chapter 26, Section 1344 (CWA 404) permits under the Corps' NH State Programmatic General Permit.
