

# Put your junk car in good hands.

## Use only a **licensed** auto recycler.

Licensed auto recyclers know that

**85% of your vehicle is recyclable.**

They also know that your junk car  
--if abandoned or improperly dismantled--  
creates real risks to human health and the environment.

It's true.

For example, gasoline and oil allowed to spill or leak onto the  
ground can contaminate  
drinking water wells and surrounding groundwater.

Also, some vehicle parts contain  
mercury, lead and other contaminants  
that are highly toxic to humans.

**Be smart. Make sure your junk car ends up in the  
hands of a reputable licensed auto recycler.**

For more information, go to [www.des.nh.gov](http://www.des.nh.gov) and search "Auto Salvage Yards."
