Subject: Reitre the Schiller coal plant!

AIR RESOURCES DIVISION

Dear Online Comment Delivery,

I am writing to oppose the proposed draft permit for Schiller Station, owned by Public Service Company of New Hampshire, now called Eversource. DES is proposing to allow Eversource to have a one year extension to meet environmental protections for mercury pollution and then build costly new pollution controls for a plant that should instead be retired.

After years of unmitigated emissions of mercury and other seriously dangerous pollutants, investing in the aging plant is a major waste of time and money. It is far more important to invest in cleaner sources of energy, like energy efficiency, wind and solar, in order to abate the health risks from burning coal for electricity and to build up our economy and improve our environment.

Coal burning power plants like Schiller are too costly to compete with newer cleaner power plants. Its antiquated infrastructure will continue to require upgrades to operate and meet new air standards for pollution that will be a financial drain on New Hampshire ratepayers.

Now is the time to stop this never-ending cycle and start fresh. Please do not grant an extension for Schiller and urge that it instead be retired and we can continue the great progress that New Hampshire has made to protect public health and move beyond coal.

Sincerely,
Brian Dockstader

I received our utility bill and unhappily noticed the increase in the payment due. I should not be paying for updating old coal buning power plants. THESE PLANTS SHOULD BE SHUT DOWN...IMMEDIATELY! I am appalled at the harmful emissions that are spewing daily from those large smoke stacks. This is toxic pollution that effects the coastal area, New Hampshire, New England, the USA & ultimately the world.

Sincerely,
Linda Torossian

IT MAKES NO SENSE TO THROW MORE MONEY AT AN OLD COAL OPERATION THAT SUPPOSEDLY WILL BE CLOSED IN A YEAR.

WHAT A WASTE OF FUNDS! I SUSPECT THAT IF AN UPGRADE TO PART OF THE PLANT IS UNDERTAKEN, THEN IN A YEAR OR SO THIS EXPENSE WILL BE USED AS PART OF AN ARGUMENT TO ALLOW THE PLANT TO CONTINUE OPERATING.

Sincerely,
Angus Macqueen

This would be a great time to increase incentives for solar power too. That way more people can afford it and we can keep NH clean and beautiful.

Sincerely,
Mark Boren

--- Add a personal comment here for more impact ---For DECADES now, the citizens have suffered at the Hands of PUC(Public Utilities Commission) and the NH Legislature that bends over everytime Big Business offers a tip. PSNH has held one of the Most Distinguished SHAMEFUL AWARDS in the NATION. FOR YEARS, PSNH has BURDENED the good citizens of New Hampshire with some of the HIGHEST ELECTRIC RATES IN the United States.

Let's ask the American Lung Association how the Asthma and Respiratory Illness Rates are here in the Granite State are.? Verizon "Dumped" their Losses on Fairpoint, and who got the BILL? The Taxpayers. Who gets the Bill with ?"Eversource" the fictitious facade of a moniker attempting to put a "Clean Face" on a Filthy Company. Call it what it really is, a Band-Aid that Does NOTHING to FIX the PROBLEM. NH Politicians will wiggle through this maze and buy a few new Boats to further pollute Lake Winni, or get a few new "summer houses" to bask away in their Glory. Let's have some Transparency, don't gloss over the Truth. Assign Independent (non-cronies) People to do the research and crunch the numbers, don't allow the Foxes to guard the Henhouses. We all breathe the air in this beautiful state, is it too much too ask that the air be Clean ? ..?Eversource...hah!an Ever Source of Greed.

I live across the river from the Schiller coal plant. It is antiquated and a safety hazard, and should be shut down. Investing the money in a new structure and cleaner source of energy is the only thing that makes sense economically. Retire the plant and invest in something that makes sense!

Thank you,
Jenn Kurtz

Subject: Reitre the Schiller coal plant!

Dear Online Comment Delivery,

I am writing to oppose the proposed draft permit for Schiller Station, owned by Public Service Company of New Hampshire, now called Eversource. DES is proposing to allow Eversource to have a one year extension to meet environmental protections for mercury pollution and then build costly new pollution controls for a plant that should instead be retired.

After years of unmitigated emissions of mercury and other seriously dangerous pollutants, investing in the aging plant is a major waste of time and money. It is far more important to invest in cleaner sources of energy, like energy efficiency, wind and solar, in order to abate the health risks from burning coal for electricity and to build up our economy and improve our environment.

Coal burning power plants like Schiller are too costly to compete with newer cleaner power plants. Its antiquated infrastructure will continue to require upgrades to operate and meet new air standards for pollution that will be a financial drain on New Hampshire ratepayers.

Now is the time to stop this never-ending cycle and start fresh. Please do not grant an extension for Schiller and urge that it instead be retired and we can continue the great progress that New Hampshire has made to protect public health and move beyond coal.

Isn't the right to breathe clean air a self evident truth?

And isn't it (well past) time to invest in sustainable and clean energy anyway, rather than keeping this dinosaur alive at unjustifiable cost - both monetary and health?

The New Hampshire seacoast is a beautiful area - and my home - so let's do everything to keep it that way, and STOP destroying it for petty greed.

Sincerely,
Hubert Krah

We have the opportunity to go in a better, cleaner and more sustainable direction with energy production. Solar electric is not only a far superior source of clean energy, it's also a huge job creator. Let's finally be done with dirty power and move into the future by embracing and supporting solar power and the many jobs it will create.

Sincerely,
Steve Mcphee

The easy decision is to keep using antiquated energy sources that pollute our lands. It will be harder to find renewable and sustainable forms of energy but in the end it will be better for everyone. This is 2015 and we must try!

Burning coal and coal dust produces irreparable harm to health of locals. The amount of diesel used to trucking wood chips from distant sources negates the benefits of burning biomass. As for emissions data collection, there needs to be a better location for direct local impact. It is time to mothball the site and plan its disposal for future development.

I have witnessed development of secondary disabilities and declining conditions of disabled individuals in Elliott, Portsmouth, Newington, and surrounding communities. I am looking forward to the next decade of declining rates of respiratory and cardiac complications in nearby Maine and New Hampshire populations.

In my opinion, renewable sources will replace and advance the energy generating sector. Certainly, supporting job creating opportunities, such as assembly of wind turbines in the shipyard dry docks and deployment of floating platforms offshore in federally governed waters will have greater impact on Portsmouth economy in the years beyond 2020 than wasted resources on protracted legal proceedings in attempts of keeping Schiller running past its expiration date - Y2K!

Ystillnow?

I have lived on Dover Point, five minutes from the Schiller Station, for thirty years this summer; its billowing clouds pollute our air night and day. Continuing to operate this plant is moving backward in every respect by investing in costly stop-gap temporary measures. Please deny the permit and invest instead in renewable energy sources!

Sincerely,
Nancy Lukens

Subject: Reitre the Schiller coal plant!

Dear Online Comment Delivery,

I am writing to oppose the proposed draft permit for Schiller Station, owned by Public Service Company of New Hampshire, now called Eversource. DES is proposing to allow Eversource to have a one year extension to meet environmental protections for mercury pollution and then build costly new pollution controls for a plant that should instead be retired.

After years of unmitigated emissions of mercury and other seriously dangerous pollutants, investing in the aging plant is a major waste of time and money. It is far more important to invest in cleaner sources of energy, like energy efficiency, wind and solar, in order to abate the health risks from burning coal for electricity and to build up our economy and improve our environment.

Coal burning power plants like Schiller are too costly to compete with newer cleaner power plants. Its antiquated infrastructure will continue to require upgrades to operate and meet new air standards for pollution that will be a financial drain on New Hampshire ratepayers.

Now is the time to stop this never-ending cycle and start fresh. Please do not grant an extension for Schiller and urge that it instead be retired and we can continue the great progress that New Hampshire has made to protect public health and move beyond coal.

My neighborhood is located directly adjacent to Schiller Station, Interstate 95, and an Irving oil facility. I worry about the impact of the combined emissions from these sources on my family's health and the natural resources of the Piscataqua River and Great Bay Estuary. Closing Schiller Station would be a step in the right direction.

Sincerely,
David Anderson

PSC has been sucking public money for years. Please don't give them any more for their unsound decisions.

Thank you,
Linnea

I am writing to urge you to deny Eversource their request to delay in dealing with the aged, pollution-spewing Schiller coal plant in Portsmouth. Trying to bring this plant up to current standards regarding mercury pollution would be extremely costly and not a good investment given the age of the plant.

The days when coal-fired energy was acceptable are over. Coal is one of the dirtiest types of fuel, causing asthma and other illnesses. We need to invest in cleaner sources of energy, and we need to move as quickly as possible to reduce and eliminate our dependency on all fossil fuels. Retiring this elderly power plant would be a great first step. So to reiterate, I strongly urge you not to allow Eversource any extensions on the Schiller coal plant, but rather to stress with them the need to close the plant permanently.

Sincerely,
Cathy Goldwater

---This plant is so filthy and for years it has polluted the environment on this river! I have personal experience regarding this as my father worked on this plant 30 plus years ago as well as I subcontracted work here as a welder many years ago myself and this plant is so outdated and dirty energy that we need to replace this with green technology!

Sincerely,
Glen Benjamin

NH electric bills have skyrocketed out of control. This plant is destroying our air, and, if it is kept going, will only keep those electric bills higher.

It has been neglected too long and has become too dangerous. At some point, one needs to say that something can't be fixed enough to be worth it. That time, for the Schiller coal plant, is now!

Please! It is time to shut this down.

Thank you.

Sincerely,
Bonnie Wright
