REM-27

2020

Delivery Prohibition of Petroleum to Regulated Underground Storage Tanks

New Hampshire RSA 146-C prohibits facility owners/operators and oil delivery companies from filling a tank or tanks at an underground storage tank facility that continues to violate spill prevention, overfill protection, release detection, leak monitoring, or corrosion protection requirements of the New Hampshire Administrative Rules Env-Or 400 Underground Storage Tank Facilities by Red Tag authority.

New Hampshire's Red Tag procedures

1. The New Hampshire Department of Environmental Services (NHDES) will inspect the tank/facility to assess compliance with Env-Or 400. Written notification will be provided to the owner and operator listing the compliance deficiencies, compliance options and time frame to correct the deficiencies that were noted during the inspection.
2. If the owner/operator fails to correct the deficiencies within the required time frame, NHDES will issue a "Notice of Intent to Red-Tag" letter to the owner and operator. The Notice of Intent to Red-Tag letter will include an additional time frame to correct the deficiencies after which NHDES will affix the red tag to the tank/facility, thereby prohibiting the delivery of oil to the tank/facility.

NHDES will also provide any requesting delivery company a list of the tank/facilities that were issued a Notice of Intent to Red-Tag letter and a list of the tank/facilities that are red-tagged.

3. NHDES will post a list of red-tagged tanks/facilities on the NHDES Waste Management Division Underground Storage Tank webpage and [OneStop data retrieval site](#).
4. Should the owner or operator bring the tank/facility into compliance, NHDES will remove the red tag from the tank/facility and remove the tank/facility from the list of red tagged tanks/facilities on the web page. The tank/facilities can then resume receiving oil deliveries.
