PROPOSED AMENDMENT OF THE NASHUA, NH CARBON MONOXIDE MAINTENANCE PLAN

BACKGROUND

The City of Nashua, New Hampshire was designated nonattainment for the carbon monoxide (CO) National Ambient Air Quality Standard (NAAQS) on April 11, 1980 (45 FR 24869). In 1991, following passage of the 1990 Clean Air Act Amendments, the city retained this designation by law (see 56 FR 56694), although ambient monitoring showed attainment at that time. On February 2, 1999 the State of New Hampshire submitted a formal CO redesignation request for Nashua, and on November 29, 2000, the U.S. EPA redesignated the Nashua nonattainment area to attainment for the CO standard and approved New Hampshire's maintenance plan (65 FR 71060). Since that time there have been no violations of the CO NAAQS of 9ppm (8 hour average) or 35ppm (1 hour average) in Nashua, and CO is trending downward to a level less than half the NAAQS.

In addition to the downward trend shown by the monitoring data, the state has performed mobile source modeling and conformity analyses which indicate that winter CO levels in Nashua will not reach even half the CO Conformity Budget as far out into the future as 2025, beyond the end of the maintenance plan.

Therefore, New Hampshire now proposes to discontinue monitoring for CO in Nashua. Nashua is a "sole pollutant" site, monitoring only CO. DES allocates considerable resources each year to cover the lease agreement with the property owner, maintenance of the monitoring and support equipment, phone and electricity, travel to and from the site from the main office in Concord, and staff time to conduct routine and emergency maintenance, all of which are resources that could better be used elsewhere in the state's monitoring program.

DISCUSSION

In the maintenance plan that was included in the document "**Request to Redesignate the City of Nashua, NH to Attainment for Carbon Monoxide,**" submitted to EPA on December 3, 1998 and approved on November 29, 2000, New Hampshire agreed to do the following to ensure continued compliance with the CO NAAQS in Nashua:

- Provide Attainment Emission Inventory, base year and projected, 1999-2020 (approved into the SIP at 65 FR 71060).
- Verify Continued Attainment.
- Adopt Contingency Measures if needed, including:

- The NH Low Emission Vehicle Program (NLEV), approved into the SIP at 65 FR 12476.
- The NH Enhanced Safety Inspection Program (alternative I&M SIP), published at 63 FR 69589).

As previously stated, CO levels have been falling in Nashua since the early 1980s (see attached graph of Nashua CO levels). The NAAQS of 9 ppm (8 hour average) has not been violated since 1986, and current readings of the 8 hr 2nd high design value are in the 2 to 3 ppm range, and have been for the past three (3) years. Most of the CO reduction has been due to "fleet turnover," with newer, cleaner motor vehicles making up an increasing share of the fleet, and this trend is unlikely to change. Additionally, despite the continuing downward trend in CO concentrations, New Hampshire has adopted both of the contingency measures listed above, for ground-level ozone control. (Note that NH NLEV has since been superceded by the federal Tier II motor vehicle standards.)

On page 4 of the December 3, 1998 redesignation request, section **2.0 "Attainment of the NAAQS for Carbon Monoxide"** states: "Attainment of the CO NAAQS can be demonstrated based on: monitored CO hot spot DV (design value) levels below the 8-hour NAAQS; or modeled current year CO hot spot concentrations below the NAAQS. The design value for the purposes of the redesignation request was 7.8 ppm.

Section **2.2 "Modeled Attainment"** states: "The CO DV at the Main/Canal/Franklin Street site was determined strictly on the basis of monitoring data. However, modeling was also performed for that site, as well as for six other selected hot spot sites in Nashua for the year 1999, using the EPA-approved CAL3QHC model. The results... show that the highest current (1999) modeled 8-hour CO concentration at any of the hot spot locations in the city is 8.8 ppm, or 0.2 ppm below the 8-hour NAAQS. This is about one ppm higher than the most recently monitored maximum 8-hour levels, supporting the inherent conservatism of the CAL3QHC model."

Section 6.5.3 "**Selection of a Nonattainment Indicator**" (page 27) states: "The 9/4/92 EPA/Calcagni memorandum (Section 5e) obligates the State to select a contingency threshold or 'trigger,' such as a monitored CO exceedance or violation, and commit to implementing the appropriate contingency measure once the threshold is exceeded. *For the purposes of this plan, New Hampshire is proposing to implement its contingency program in the event that a CO violation (the 'contingency trigger') is monitored in Nashua in any year during the maintenance period and to consider one or more of the other EPA-approved measures... if necessary.*" (italics added.)

Based on the downward CO trend, New Hampshire now proposes to modify the contingency threshold or "trigger" in Nashua. The state proposes to cease monitoring for CO in Nashua, and instead, to continue monitoring for CO in nearby Manchester, and to use these data as a surrogate for Nashua CO levels (see attached graph comparing CO levels in the two cities). The italicized portion of Section 6.5.3, above, is proposed to be modified to read as follows:

“For the purposes of this plan, New Hampshire will be discontinuing CO monitoring in Nashua upon EPA approval of this revised plan. New Hampshire DES will continue to collect and review CO monitoring data from nearby Manchester, NH on an on-going basis. In the event the second-highest CO concentration in any calendar year monitored in Manchester reaches 75 percent of the federal 1-hour or 8-hour national ambient air quality standard (NAAQS) for CO, New Hampshire will, within 9 months of recording such concentrations, re-establish a CO monitoring site in Nashua consistent with EPA siting criteria, and resume analyzing and reporting those data. New Hampshire will continue to commit to implement its contingency program in Nashua in the event that a CO violation (the ‘contingency trigger’) is monitored at the re-established Nashua monitoring site at any time during the maintenance period, and to consider one or more of the other EPA-approved measures listed in Section 6.5.2 if necessary to reduce CO levels.

If the Manchester CO monitor measures a violation of either the federal 1-hour or 8-hour NAAQS for CO, the contingency measures in Section 6.5.2 will be implemented in Nashua as well, until a re-established Nashua CO monitor shows that the area is in attainment of the CO standard.

When implementing contingency measures, New Hampshire will review and implement the measures necessary to remedy the violation, including transportation control measures (TCM) or other additional vehicle or fuel controls.”

NASHUA, NEW HAMPSHIRE 8 hr Carbon Monoxide 2nd High (standard = 9 ppm)

Carbon Monoxide in New Hampshire Highest Monitored 8-Hour Average Concentrations 1973 - 2005

EVIDENCE OF LEGAL AUTHORITY

40 CFR Part 51, Appendix V, 2.1(c)

Laws of New Hampshire, RSA 125-C:4
Rulemaking Authority; Subpoena Power

TITLE X

PUBLIC HEALTH

CHAPTER 125-C

AIR POLLUTION CONTROL

Section 125-C:4

125-C:4 Rulemaking Authority; Subpoena Power. –

- I. The commissioner shall adopt rules under RSA 541-A, relative to:
- (a) The prevention, control, abatement, and limitation of air pollution, including, but not limited to, open air source pollution, mobile source pollution, and stationary source pollution.
 - (b) Primary and secondary ambient air quality standards.
 - (c) Procedures to meet air pollution emergencies, as authorized by RSA 125-C:9.
 - (d) The establishment and operation of a statewide permit system, as authorized by RSA 125-C:6, XIV, RSA 125-C:11, I and RSA 125-C:11, I-a.
 - (e) Devices, in addition to those devices defined under RSA 125-C:2, subject to the permit requirements of RSA 125-C:11, as authorized by RSA 125-C:11, II.
 - (f) The exemption of certain devices and non-Title V sources from the permit requirements of RSA 125-C:11, I and the conformance of exempted devices to established standards, as authorized by RSA 125-C:11, I.
 - (g) The forms and information required on applications for temporary and permanent permits required under RSA 125-C:11, as authorized by RSA 125-C:12, I.
 - (h) Notification of and public hearing on permit applications, including exemptions from those requirements, as authorized by RSA 125-C:12, II.
 - (i) Fees for permit application and review, as authorized by RSA 125-C:12, IV.
 - (j) Procedures for permit application review, as authorized by RSA 125-C:11, IV, and criteria for permit denial, suspension or revocation, as authorized by RSA 125-C:13.
 - (k) Procedures for air testing and monitoring and recordkeeping, as authorized by RSA 125-C:6, XI.
 - (l) Procedures for receiving violation complaints and for rules enforcement, as authorized by RSA 125-C:15, I.
 - (m) Procedures for granting variances, as authorized by RSA 125-C:16.
 - (n) The manufacture, use, or sale of consumer products for purposes of implementing RSA 485:16-c.
 - (o) Applicability thresholds for emissions of particulate matter, mercury, and dioxin as provided in RSA 125-C:10-b, VII(f).
 - (p) The duration of time during which no additional best available control technology determination is required as provided in RSA 125-C:10-b, IV and VI.
 - (q) Procedures for establishing standards for and certification of any material, that is

not an exempt fuel, to be combusted in a device at an affected source subject to RSA 125-C:10-b.

I-a. In adopting rules under paragraph I, the department may incorporate by reference standards issued by the California air resources board relative to certification and testing of vapor recovery equipment.

I-b. In adopting rules under subparagraph I(n), the department may incorporate by reference other state test methods and procedures that are referenced in the model rules of the Ozone Transport Commission (OTC) concerning consumer products, as defined in RSA 125-C:2, V-c.

II. The commissioner is authorized to issue subpoenas requiring the attendance of such witnesses and the production of such evidence and to administer such oaths and to take such testimony as he may deem necessary.

**EVIDENCE OF EPA APPROVAL OF NASHUA, NH CARBON
MONOXIDE MAINTENANCE PLAN**

DATES: This deviation is effective from 7 a.m. on December 1, 2000 through 5 p.m. on December 15, 2000.

ADDRESSES: Unless otherwise indicated, documents referred to in this notice are available for inspection or copying at the office of the Eighth Coast Guard District, Bridge Administration Branch, Commander (ob), 501 Magazine Street, New Orleans, Louisiana, 70130-3396. The Bridge Administration Branch maintains the public docket for this temporary deviation.

FOR FURTHER INFORMATION CONTACT: Phil Johnson, Bridge Administration Branch, telephone (504) 589-2965.

SUPPLEMENTARY INFORMATION: The State Route 82, swing span bridge across Sabine Lake, mile 10.2, near Port Arthur, Texas, has a vertical clearance of 9 feet above high water in the closed-to-navigation position and unlimited clearance in the open-to-navigation position. Navigation on the waterway consists primarily of fishing vessels, and recreational craft, although the bridge is occasionally transited by small tugs with tows, transporting sand, gravel and marine shells. The State of Texas, Department of Transportation requested a temporary deviation from the normal operation of the drawbridge in order to accommodate the maintenance work, involving construction of a new operator house and replacement of the submarine power supply cable and other electrical and mechanical repairs. This maintenance is necessary for the continued operation of the bridge. An alternate route via the Gulf Intracoastal Waterway is available.

This deviation allows the draw of the State Route 82 Bridge swing span drawbridge across Sabine Lake, mile 10.0, to remain closed to navigation from 7 a.m. on December 1, 2000 through 5 p.m. on December 15, 2000.

Dated: November 14, 2000.

Paul J. Pluta,

Rear Admiral, U.S. Coast Guard, Commander, Eighth Coast Guard District.

BILLING CODE 4910-15-U

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Parts 52 and 81

[NH-45-7172a; A-1-FRL-6906-2]

Approval and Promulgation of Air Quality Implementation Plans and Designations of Areas for Air Quality Planning Purposes; State of New Hampshire; Revision to the Carbon Monoxide State Implementation Plan, City of Nashua; Carbon Monoxide Redesignation Request, Maintenance Plan, Transportation Conformity Budget, and Emissions Inventory for the City of Nashua; Carbon Monoxide Redesignation Request, Maintenance Plan, Transportation Conformity Budget, and Emissions Inventory for the City of Manchester

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency (EPA) is redesignating the Nashua, New Hampshire nonattainment area to attainment for the carbon monoxide (CO) air quality standard and approving a maintenance plan that will insure that the Nashua area remains in attainment. The EPA is also redesignating the Manchester, New Hampshire nonattainment area to attainment for the CO air quality standard and approving a maintenance plan that will insure that the Manchester area remains in attainment. Under the Clean Air Act, as amended in 1990 (the CAA), designations can be revised if sufficient data are available to warrant such revisions and the request to redesignate shows that all of the requirements of section 107(d)(E)(3) of the CAA have been met. EPA is approving the New Hampshire maintenance plans and other redesignation submittals because they meet the maintenance plan and redesignation requirements, and will ensure that the two areas remains in attainment. The approved maintenance plans will become a federally enforceable part of the New Hampshire State Implementation Plan (SIP). In this action, EPA is also approving the New Hampshire 1990 baseline emission inventories for both of these areas, transportation conformity budgets for both areas and a revision to the motor vehicle inspection and maintenance (I/M) SIP approved for the Nashua area.

DATES: This direct final rule is effective January 29, 2001 without further notice, unless EPA receives adverse comment by December 29, 2000. If adverse comment is received, EPA will publish

a timely withdrawal of the direct final rule in the *Federal Register* and inform the public that the rule will not take effect.

ADDRESSES: Comments may be mailed to David Conroy, Unit Manager, Air Quality Planning, Office of Ecosystem Protection (mail code CAQ), U.S. Environmental Protection Agency, New England office, One Congress Street, Suite 1100, Boston, MA 02114-2023. Copies of the State's redesignation requests and other information supporting this action and EPA's technical support document are available for public inspection during normal business hours, by appointment at the Office of Ecosystem Protection, U.S. Environmental Protection Agency, New England office, One Congress Street, 11th floor, Boston, MA and Air Resources Division, Department of Environmental Services, 6 Hazen Drive, P.O. Box 95, Concord, NH 03302-0095.

FOR FURTHER INFORMATION CONTACT: Jeffrey S. Butensky, Environmental Planner, Air Quality Planning Unit of the Office of Ecosystem Protection (mail code CAQ), U.S. Environmental Protection Agency, New England office, One Congress Street, Boston, MA 02114-2023, (617) 918-1665 or at butensky.jeff@epa.gov.

SUPPLEMENTARY INFORMATION:

I. Summary of SIP Revisions

Why is EPA taking this action?

Why are we concerned about carbon monoxide?

How did EPA establish Manchester and Nashua as nonattainment for carbon monoxide?

Why did New Hampshire initiate an Inspection and Maintenance program in the Nashua area?

What are the related Clean Air Act requirements, and how does New Hampshire meet them?

Why Is EPA Taking This Action?

On February 2, 1999, the State of New Hampshire submitted formal CO redesignation requests for the City of Manchester and the City of Nashua. These two submittals also included maintenance plans, 1990 CO emission inventories, and transportation conformity budgets for both cities. Both of these submittals are being approved in today's action. New Hampshire also submitted a revision to the CO attainment SIP for Nashua. This submittal, dated February 1, 1999, requests to replace the previously implemented CO I/M program in the Nashua area with controls consisting of the existing federal Tier 1 emission

standards for new vehicles¹ and the federal reformulated gasoline program (RFG).² This request is also being approved in today's action. Please note that if EPA receives adverse comment on an amendment, paragraph, or section of this rule and if that provision may be severed from the remainder of the rule, EPA may adopt as final those provisions of the rule that are not the subject of an adverse comment.

Why Are We Concerned About Carbon Monoxide?

Inhaling high levels of CO inhibits the blood's capacity to carry oxygen to organs and tissues. Persons with heart disease, children, and individuals with respiratory diseases are particularly sensitive to CO. Effects of CO on healthy adults include impaired exercise capacity, visual perception, manual dexterity, learning functions, and ability to perform complex tasks. As a result of these potential health impacts, EPA developed National Ambient Air Quality Standards (NAAQS), or the level at which CO concentrations in the ambient air become unhealthy.³ In response to the NAAQS and pursuant to CAA requirements, States have developed programs to reduce CO to levels that are below the NAAQS.

How Did EPA Establish Manchester and Nashua as Nonattainment for Carbon Monoxide?

The City of Manchester was designated nonattainment on March 31, 1978 (43 FR 8962) and the City of Nashua was designated nonattainment on April 11, 1980 (45 FR 24869). On November 15, 1990, the Clean Air Act Amendments of 1990 were enacted. Public Law 101-549, 104 Stat. 2399, codified at 42 U.S.C. 7401-7671q. Pursuant to Section 107(d)(1)(C) of the CAA, the City of Manchester and the City of Nashua retained their designations of nonattainment for carbon monoxide by operation of law. See (56 FR 56694 (November 6, 1991)). At the same time, both areas were classified as "not classified" since ambient monitoring data for both areas was showing attainment of the CO NAAQS.

Because these areas were not classified under the CAA, it is section 172 of the CAA that sets forth the

¹ Tier 1 motor vehicle standards have been implemented beginning with model year 1994.

² Reformulated gasoline has been sold since 1995 in the four southernmost counties of New Hampshire (i.e., Merrimack, Hillsborough, Rockingham, and Strafford).

³ EPA defines the NAAQS as nine parts per million averaged over an eight-hour period, and this threshold cannot be exceeded more than once a year or an area would be violating the NAAQS.

applicable requirements for these nonattainment areas. The 1990 CAA required such areas to achieve the standard by November 15, 1995, and both Manchester and Nashua have fulfilled this requirement.

On February 1, 1999, the State of New Hampshire sent EPA a CO attainment plan revision request for Nashua, and on February 2, 1999, submitted a redesignation request, maintenance plan, requisite emission inventory, and conformity budgets for the City of Nashua. Similarly, on February 2, 1999, New Hampshire submitted a redesignation request, maintenance plan, requisite emission inventory, and conformity budget for the City of Manchester. All of these components are being approved today and are discussed in detail in this document. New Hampshire submitted evidence that the State held public hearings on January 7, 1999, for the Nashua CO attainment plan revision, the Nashua CO redesignation request and related components, and the Manchester CO redesignation request and related components.

Why Did New Hampshire Initiate an Inspection and Maintenance Program in the Nashua Area?

In 1985, the State of New Hampshire submitted several SIP revisions forming the components the CO attainment plan that included a basic I/M program for CO. This basic CO I/M program was implemented in Nashua and eleven surrounding towns⁴ starting in 1987. The program was designed to cease operating on January 1, 1995 and the State legislature allowed it to cease at that time.⁵ The Nashua area came into attainment with the CO NAAQS in 1987, and has continued to maintain attainment with the CO standard since then.

Prior to redesignation, New Hampshire cannot remove the Nashua CO I/M program from its SIP unless it makes a demonstration under CAA section 193, the so-called savings clause, that the State is replacing that program with another that achieves equivalent or greater emissions reductions in the nonattainment area. Therefore, in addition to requesting that EPA redesignate the Nashua area to attainment, the State also submitted a request to replace the Nashua CO I/M program with controls consisting of the

⁴ Nashua, Hollis, Merrimack, Litchfield, Hudson, Milford, Amherst, Pelham, Londonderry, Derry, Windham, and Salem.

⁵ House Bill 674, approved by the New Hampshire State Legislature in 1993, terminated the Motor Vehicle Inspection Program, effective January 1, 1995.

Tier 1 emission standards and the reformulated gasoline program (RFG). These programs became effective in New Hampshire in 1994 and 1995, respectively.

The New Hampshire Department of Environmental Services (NHDES) conducted an analysis that provides evidence that the Tier 1 emission standards and the RFG program are providing equal or more emission reductions than the Nashua CO I/M program. The calculations show that the replacement package of measures (i.e. Tier 1 standards and RFG) provides approximately 10 tons per day more emission reductions than the basic I/M program for CO. Therefore, New Hampshire demonstrated that the replacement programs provided more of a benefit than the Nashua CO I/M program. Based on this conclusion, EPA is approving New Hampshire's request to replace the I/M program with the aforementioned replacement controls as a prerequisite for redesignating Nashua to attainment for CO. For more information, please see the Technical Support Document.

What Are the Related Clean Air Act Requirements, and How Does New Hampshire Meet Them?

Section 107(d)(3)(E) of the 1990 Clean Air Act Amendments provides five specific requirements that an area must meet in order to be redesignated from nonattainment to attainment.

1. The area must have attained the applicable NAAQS;
2. The area must have a fully approved SIP under section 110(k) of CAA;
3. The air quality improvement must be permanent and enforceable;
4. The area must have a fully approved maintenance plan pursuant to section 175A of the CAA;
5. The area must meet all applicable requirements under section 110 and Part D of the CAA.

The New Hampshire redesignation request meets the five requirements of section 107(d)(3)(E) as discussed in the following:

1. *Attainment of the CO NAAQS*—New Hampshire has CO air monitoring data that provides evidence that both Manchester and Nashua have met the CO NAAQS. To attain the CO NAAQS, an area must have complete quality-assured data showing no more than one exceedance of the NAAQS over at least two consecutive years. The ambient air CO monitoring data relied upon by New Hampshire in its redesignation request shows no violations of the CO NAAQS since 1987 in Nashua and since 1988 in Manchester. In addition, the state

submitted modeling results using EPA's MOBILE5b emission model with specific inputs described in the submittal and New Hampshire also ran the CAL3QHC (version 2.0) dispersion model for the key traffic intersections addressed in the CO SIP. These modeling runs show no violations of the CO NAAQS throughout the maintenance period (through 2010 and 2020). New Hampshire also has committed to continue to monitor CO in both Manchester and Nashua.

2. *Fully Approved SIP*—New Hampshire's CO SIPs are fully approved by EPA as meeting all the requirements of Section 110 of the Act, including the requirement in Section 110(a)(2)(I) to meet all the applicable requirements of Part D (relating to nonattainment), which were due prior to the date of New Hampshire's redesignation request. On February 26, 1985, March 1, 1985, September 12, 1985, and December 3, 1985, New Hampshire submitted documents that, taken together, constitute the CO attainment plan for Nashua, including a CO I/M program for the Nashua area. In addition to this I/M program, the State implemented several intersection and traffic flow measures in Nashua to reach attainment. On August 4, 1986, EPA issued a conditional approval of the States' I/M plan for the Nashua area (51 FR 27878). The I/M plan, which was a necessary component of the Nashua attainment plan, was subsequently approved on June 12, 1987 (52 FR 22503), resulting in EPA's final approval of the attainment plan SIP on August 25, 1988 (53 FR 32391).

On October 5, 1982, and December 20, 1982, the State submitted an attainment plan for Manchester that EPA subsequently approved on June 27, 1983 (48 FR 29479). To reach attainment, the state implemented signal adjustments and the addition of turn lanes in the downtown Manchester area.

Before EPA may redesignate the New Hampshire areas to attainment, the SIP must have fulfilled the applicable requirements of part D. Under part D, an area's classification indicates the requirements to which it is subject. Subpart 1 of part D sets forth the basic nonattainment requirements applicable to all nonattainment areas, classified as well as not classifiable. Therefore, to be redesignated to attainment, the State must meet the applicable requirements of subpart 1 of part D—specifically sections 172(c) and 176. Additionally, the 1990 CAA required that CO nonattainment areas such as Manchester and Nashua to achieve other specific new requirements. Each of these requirements are discussed in greater detail below.

Reasonably Available Control Measures: The General Preamble for the implementation of Title One of the Clean Air Act Amendments of 1990 (57 FR 13498 (April 16, 1992)) explains that section 172(c)(1) requires the plans for all nonattainment areas to provide for the implementation of all Reasonably Available Control Measures (RACM) as expeditiously as practicable. The EPA interprets this requirement to impose a duty on all nonattainment areas to consider all available control measures and to adopt and implement such measures as are reasonably available for implementation in the area as components of the area's attainment demonstration. This includes the previously mentioned CO I/M program in Nashua and the street and intersection improvements in both Manchester and Nashua. Because each area has reached attainment, no additional measures are needed to provide for attainment.

Emission Inventory: Under the Clean Air Act as amended, States have the responsibility to inventory emissions contributing to NAAQS nonattainment, to track these emissions over time, and to ensure that control strategies are being implemented that reduce emissions and move areas toward attainment. Section 172(c)(3) of the CAA requires that nonattainment plan provisions include a comprehensive, accurate, and current inventory of actual emissions from all sources of relevant pollutants in the nonattainment area. New Hampshire included the requisite inventory in the February 2, 1999 submittals for both Manchester and Nashua using 1990 as the base year for the inventory. Stationary point sources, stationary area sources, on-road mobile sources, and non-road mobile sources of CO were included in the inventories. The inventory is designed to address actual CO emissions for the area during the peak CO season. Available guidance for preparing emission inventories is provided in the General Preamble (57 FR 13498 (April 16, 1992)). In today's action, EPA is approving the emission inventories for the Manchester and Nashua areas.

New Source Review: In an October 14, 1994 memorandum from Mary D. Nichols entitled "Part D New Source Review (part D NSR) Requirements for Areas Requesting Redesignation to Attainment," EPA established a new policy under which nonattainment areas may be redesignated to attainment notwithstanding the lack of a fully-approved part D NSR program, provided the program is not relied upon for maintenance. Consistent with policy, EPA is not requiring as a prerequisite to

redesignation that the Manchester and Nashua CO nonattainment areas have a fully approved part D NSR program that meets the CAA requirements of 1990. In making this decision, EPA found that New Hampshire has not relied on its current SIP approved NSR program for CO sources to maintain attainment. On July 2, 1999, New Hampshire submitted NSR SIP revisions to make its rules consistent with the CAA requirements of 1990. In addition, the federal Prevention of Significant Deterioration (PSD) program under 40 CFR 52.21 will apply in the Manchester and Nashua CO areas once redesignated to prevent emission increases from new major new sources or major modifications in these areas from causing or contributing to a violation of the NAAQS.

Conformity: Under section 176(c) of the CAA, States are required to submit revisions to their SIPs that include criteria and procedures to ensure that federal actions conform to the air quality planning goals in the applicable SIPs. The requirement to determine conformity applies to transportation plans, programs, and projects developed, funded or approved under Title 23 U.S.C. or the Federal Transit Act ("transportation conformity"), as well as all other federal actions ("general conformity"). Congress provided for the State revisions to be submitted one year after the date of promulgation of final EPA conformity regulations. EPA promulgated revised final transportation conformity regulations on August 15, 1997 (62 FR 43780) and final general conformity regulations on November 30, 1993 (58 FR 63214).

These conformity rules require that the States adopt both transportation and general conformity provisions in the SIP for areas designated nonattainment or subject to a maintenance plan approved under CAA section 175A. Pursuant to Sec. 51.390 of the transportation conformity rule, the State of New Hampshire was required to submit a SIP revision containing transportation conformity criteria and procedures consistent with those established in the federal rule by August 15, 1998. Similarly, pursuant to Sec. 51.851 of the general conformity rule, New Hampshire was required to submit a SIP revision containing general conformity criteria and procedures consistent with those established in the federal rule by December 1, 1994.

On July 10, 1999, the State of New Hampshire submitted a general conformity rule that EPA approved into the SIP on August 16, 1999 (64 FR 44417). In addition, New Hampshire has a State approved transportation

conformity rule that was officially submitted to EPA for inclusion into the SIP on December 7, 1998. EPA has not yet taken action on the transportation conformity rule.

Although New Hampshire does not yet have an approved transportation conformity SIP, EPA may approve this redesignation request. EPA interprets the requirement of a fully approved SIP in section 107(d)(3)(E)(v) to mean that, for a redesignation request to be approved, the State must have met all requirements that become applicable to the subject area before or at the time of the submission of the redesignation request. EPA's federal conformity rules require the performance of conformity analyses in the absence of state-adopted rules. Therefore, a delay in approving state rules does not relieve an area from the obligation to implement conformity requirements.

Areas are subject to the conformity requirements regardless of whether they are redesignated to attainment and must implement conformity under all circumstances, therefore, it is reasonable to view these requirements as not being applicable requirements for purposes of evaluating a redesignation request. Furthermore, New Hampshire has continually fulfilled all of the requirements of the federal transportation conformity and general conformity rules, so it is not necessary that the State have their transportation conformity rule approved in the SIP before redesignation to insure that New Hampshire meet the substance of the conformity requirements.

On January 30, 1996, EPA modified its national policy regarding the interpretation of the provisions of section 107(d)(3)(E) concerning the applicable requirements for purposes of reviewing a CO redesignation request (61 FR 2918 (January 30, 1996)). Under this new policy, for the reasons discussed, EPA believes that the CO redesignation request may be approved notwithstanding the lack of approved state transportation conformity rules.

Each of the redesignation requests from New Hampshire contained carbon monoxide motor vehicle emission budgets for use in conformity. Those budgets were 55.83 tons per day for Manchester and 60.13 tons per day for Nashua. On March 2, 1999, the D.C. Circuit Court ruled that submitted emission budgets cannot be used for transportation conformity determinations until EPA has affirmatively found them adequate. EPA published an adequacy notice in the *Federal Register* on February 29, 2000 (65 FR 10785) notifying the public that

we have found the motor vehicle emissions budgets for the New Hampshire cities of Manchester and Nashua, received by EPA on February 2, 1999 as part of the CO redesignation requests, adequate for conformity purposes. This *Federal Register* notice was simply an announcement of a finding that we have already made in a letter to the New Hampshire Department of Environmental Services on November 2, 1999. These budgets must be used in future conformity determinations, thereby capping motor vehicle emissions and preventing monitored CO values from exceeding the NAAQS.

In this action, EPA is approving the CO emission budgets submitted by New Hampshire for the cities of Manchester and Nashua into the CO SIP.

3. Improvement in Air Quality Due to Permanent and Enforceable Measures—EPA approved all of the components of New Hampshire's CO SIPs, submitted in 1982 for Manchester and 1985 for Nashua. Emission reductions achieved through the implementation of control measures contained in New Hampshire's CO SIPs are enforceable. In Manchester, this included the addition of turn lanes at Elm and Bridge Streets. In Nashua, this included making Lowell Street a two way thoroughfare, the development of the Kinsley Street extension, removal of parking on Main Street, and Main Street traffic optimizations. In addition, a basic CO I/M program was initiated in Nashua and eleven surrounding towns in 1987 to address high levels of CO recorded at the Main Street monitor. EPA is allowing New Hampshire to replace this program with the Tier 1 motor vehicle standards and RFG, which were implemented in 1994 and 1995, respectively.

Manchester and Nashua have been achieving the CO NAAQS since 1987 and 1988, respectively, and both areas continue to monitor attainment to date. The air quality improvements in both cities are due to the permanent and enforceable measures contained in the SIPs. EPA finds that the combination of certain existing EPA-approved SIP and federal measures contribute to the permanence and enforceability of reduction in ambient CO levels that have allowed the area to attain the NAAQS.

4. Fully Approved Maintenance Plan Under Section 175A—Section 175A of the CAA sets forth the elements of a maintenance plan for areas seeking redesignation from nonattainment to attainment. The plan must demonstrate continued attainment of the applicable NAAQS for at least ten years after the

Administrator approves a redesignation to attainment. Eight years after the redesignation, the state must submit a revised maintenance plan which demonstrates attainment for the ten years following the initial ten-year period. To provide for the possibility of future NAAQS violations, the maintenance plan must contain contingency measures, with a schedule for implementation adequate to assure prompt correction of any air quality problems.

Section 175A of the Clean Air Act states that the twenty year maintenance period must consist of an initial ten year maintenance plan and the submittal of a second ten year maintenance plan eight years after redesignation. In the Manchester and Nashua CO redesignation requests, New Hampshire modeled for 2010 in addition to 2020. In addition, the State submitted a maintenance plan that extends to 2020 even though maintenance plans are typically only applicable for a ten year period, or until 2010. EPA will not require a second maintenance plan for the 2010 to 2020 period provided that New Hampshire submits to EPA an acknowledgment that the maintenance plan will remain in effect for a second ten year period, that New Hampshire will continue to implement that plan, and that both cities will remain in attainment. This acknowledgment must be received by EPA within eight years of the effective date of this redesignation. New Hampshire has acknowledged this requirement in the February 2, 1999 submittals for both Manchester and Nashua.

In this notice, EPA is approving the State of New Hampshire's maintenance plans for the Cities of Manchester and Nashua because EPA finds that New Hampshire's submittal meets the requirements of section 175A.

A. Attainment Emission Inventory

The State of New Hampshire submitted a comprehensive inventory of CO emissions for the Manchester and Nashua area. The inventory includes emissions from area, stationary, and mobile sources using 1990 as the base year for calculations. The 1990 inventory is considered representative of attainment conditions because the NAAQS was not violated during 1990 and was prepared in accordance with EPA guidance. New Hampshire established CO emissions for 1990 as well as forecasts to the year 2020. These estimates were derived from the State's 1990 emissions inventory. The State submittals contains the following information:

CARBON MONOXIDE EMISSION SUMMARY FOR MANCHESTER—BASE YEAR AND PROJECTED, 1999–2020

[Tons per day]

Year	On-road mobile	Off-road mobile	Stationary area	Stationary point	Total—all categories
1990	59.84	12.01	9.61	0.16	81.62
1999	35.86	12.78	10.15	0.16	58.95
2002	35.22	13.09	10.38	0.16	58.85
2005	34.58	13.42	10.61	0.16	58.77
2010	34.20	13.72	10.81	0.16	58.89
2020	38.90	14.43	11.20	0.16	64.69

CARBON MONOXIDE EMISSION SUMMARY FOR NASHUA—BASE YEAR AND PROJECTED, 1999–2020

[Tons per day]

Year	On-road mobile	Off-road mobile	Stationary area	Stationary point	Total—all categories
1990	62.72	9.07	7.69	0.40	79.88
1999	41.61	9.60	8.12	0.40	59.73
2002	42.56	9.79	8.26	0.40	61.01
2005	43.51	9.96	8.39	0.40	62.26
2010	45.51	10.11	8.50	0.40	64.52
2020	52.96	10.55	8.80	0.40	72.71

In today's action, EPA is approving the emission inventories for Manchester and Nashua.

B. Demonstration of Maintenance—Projected Inventories

Total CO emissions were projected from 1990 base year out to 2020. These projected inventories were prepared in accordance with EPA guidance, and it is anticipated that the area will maintain CO levels below the NAAQS.

C. Verification of Continued Attainment

Continued attainment of the CO NAAQS in the Manchester and Nashua areas depends, in part, on the State's efforts toward tracking indicators of continued attainment during the maintenance period, and the State will submit periodic inventories of CO emissions. Therefore, eight years from today, New Hampshire must submit to EPA an acknowledgment that the maintenance plan will remain in effect and New Hampshire will continue to implement it for a second ten year period and that the area will maintain attainment through 2020.

D. Contingency Plan

The level of CO emissions in the Manchester and Nashua areas will largely determine its ability to stay in compliance with the CO NAAQS in the future. Despite the State's best efforts to demonstrate continued compliance with the NAAQS, the ambient air pollutant concentrations may exceed or violate the NAAQS, although highly unlikely. Section 175A(d) of the CAA requires that the contingency provisions include

a requirement that the State implement all measures contained in the SIP prior to redesignation, and New Hampshire has fulfilled this requirement. In addition, New Hampshire has provided contingency measures in the event of a future CO air quality problem.

New Hampshire has developed a contingency plan consisting of the New Hampshire's low emission vehicle program⁶ (NLEV), which was implemented for model year 1999, and the New Hampshire Enhanced Safety Inspection Program, which was implemented in 1999.⁷ Although New Hampshire is implementing these programs as measures to achieve the NAAQS for ground level ozone, they are not required in nonclassified CO nonattainment areas under the CAA and can therefore be used as contingency measures. In order to be adequate, the maintenance plan should include at least one contingency measure that will go into effect with a triggering event. New Hampshire is relying largely on these two contingency measures that will go into effect regardless of any triggering event, thereby fulfilling this requirement. EPA accepts this approach.

E. Subsequent Maintenance Plan Revisions

In accordance with section 175A(b) of the CAA, the State must implement two ten year maintenance plans. New Hampshire must submit to EPA eight

⁶ New Hampshire's NLEV program was approved into the SIP on March 9, 2000 (65 FR 12476).

⁷ A notice of proposed rulemaking for New Hampshire's enhanced safety I/M program was published on December 17, 1998 (63 FR 69589).

years from today an acknowledgment that its 20 year maintenance plan will remain in effect for a second ten year period.

5. *Meeting Applicable Requirements of Section 110 and Part D*—In this notice, EPA has set forth the basis for its conclusion that New Hampshire has a fully approved SIP that meets the applicable requirements of Section 110 and Part D of the CAA.

II. Final Action

EPA is approving the revision to the CO SIP for the City of Nashua; the CO redesignation request, maintenance plan, transportation conformity budget, and emissions inventory for the City of Nashua; and the CO redesignation request, maintenance plan, transportation conformity budget, and emissions inventory for the City of Manchester. The EPA is publishing this action without prior proposal because the Agency views these as a noncontroversial amendments and anticipates no adverse comments. However, in the proposed rules section of this *Federal Register* publication, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision should relevant adverse comments be filed. This rule will be effective January 29, 2001 without further notice unless the Agency receives relevant adverse comments by December 29, 2000.

If the EPA receives such comments, then EPA will publish a notice withdrawing the final rule and informing the public that the rule will not take effect. All public comments

received will then be addressed in a subsequent final rule based on the proposed rule. The EPA will not institute a second comment period on the proposed rule. Only parties interested in commenting on the proposed rule should do so at this time. If no such comments are received, the public is advised that this rule will be effective on January 29, 2001 and no further action will be taken on the proposed rule.

III. Administrative Requirements

Under Executive Order 12866 (58 FR 51735 (October 4, 1993)), this action is not a "significant regulatory action" and therefore is not subject to review by the Office of Management and Budget. This action merely approves state law as meeting federal requirements and imposes no additional requirements beyond those imposed by state law. Accordingly, the Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). Because this rule approves pre-existing requirements under state law and does not impose any additional enforceable duty beyond that required by state law, it does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4). For the same reason, this rule also does not significantly or uniquely affect the communities of tribal governments, as specified by Executive Order 13084 (63 FR 27655 (May 10, 1998)). This rule will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132 (64 FR 43255 (August 10, 1999)), because it merely approves a state rule implementing a federal standard, and does not alter the relationship or the distribution of power and responsibilities established in the Clean Air Act. This rule also is not subject to Executive Order 13045 (62 FR 19885 (April 23, 1997)), because it is not economically significant.

In reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the Clean Air Act. In this context, in the absence of a prior existing requirement for the State to use voluntary consensus standards (VCS), EPA has no authority to disapprove a SIP submission for failure to use VCS. It would thus be inconsistent with applicable law for EPA, when it reviews a SIP submission, to use VCS in place of a SIP submission that otherwise satisfies the provisions of the Clean Air Act. Thus, the requirements of section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) do not apply. As required by section 3 of Executive Order 12988 (61 FR 4729 (February 7, 1996)), in issuing this rule, EPA has taken the necessary steps to eliminate drafting errors and ambiguity, minimize potential litigation, and provide a clear legal standard for affected conduct. EPA has complied with Executive Order 12630 (53 FR 8859 (March 15, 1988)) by examining the takings implications of the rule in accordance with the "Attorney General's Supplemental Guidelines for the Evaluation of Risk and Avoidance of Unanticipated Takings" issued under the executive order. This rule does not impose an information collection burden under the provisions of the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*).

The Congressional Review Act, 5 U.S.C. section 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this rule and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. section 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by January 29, 2001. Interested parties should comment in response to the proposed rule rather than petition for judicial review, unless the objection arises after the comment period allowed for in the proposal. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this rule for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. (See section 307(b)(2).)

^a Air quality levels presently below primary standards or area is unclassifiable.
^b Air quality levels presently below secondary standards or area is unclassifiable.
^c November 15, 1993.
^d November 15, 1995.
^e November 15, 1999.

3. Section 52.1528 is added to read as follows:

§ 52.1528 Control strategy: Carbon monoxide.

(a) Approval—On February 1, 1999, the New Hampshire Department of Environmental Services submitted a revision to the State Implementation Plan to remove the Nashua Inspection/Maintenance program for carbon monoxide that ceased operating on January 1, 1995. The Nashua Inspection/Maintenance was originally approved at § 52.1520(c)(39). The Nashua Inspection/Maintenance program was replaced with controls consisting of the existing federal Tier 1 emission standards for new vehicles and the federal reformulated gasoline program.

(b) Approval—On February 2, 1999, the New Hampshire Department of Environmental Services submitted a request to redesignate the City of Manchester carbon monoxide nonattainment area to attainment for carbon monoxide. As part of the redesignation request, the State submitted a maintenance plan as required by 175A of the Clean Air Act, as amended in 1990. Elements of the section 175A maintenance plan include a base year (1990 attainment year) emission inventory for carbon monoxide, a demonstration of maintenance of the carbon monoxide NAAQS with projected emission inventories to the year 2010 for carbon monoxide, a plan to verify continued attainment, a contingency plan, and an obligation to submit additional information in eight years acknowledging that the maintenance

plan will remain in effect through the year 2020, as required by the Clean Air Act. If the area records a violation of the carbon monoxide NAAQS (which must be confirmed by the State), New Hampshire will implement one or more appropriate contingency measure(s) which are contained in the contingency plan. The menu of contingency measures includes the enhanced safety inspection program and New Hampshire's low emission vehicle program (NLEV) as contingency measures. The redesignation request establishes a motor vehicle emissions budget of 55.83 tons per day for carbon monoxide to be used in determining transportation conformity for the Manchester area. The redesignation request and maintenance plan meet the redesignation requirements in sections 107(d)(3)(E) and 175A of the Act as amended in 1990, respectively.

(c) Approval—On February 2, 1999, the New Hampshire Department of Environmental Services submitted a request to redesignate the City of Nashua carbon monoxide nonattainment area to attainment for carbon monoxide. As part of the redesignation request, the State submitted a maintenance plan as required by 175A of the Clean Air Act, as amended in 1990. Elements of the section 175A maintenance plan include a base year (1990 attainment year) emission inventory for carbon monoxide, a demonstration of maintenance of the carbon monoxide NAAQS with projected emission inventories to the year 2010 for carbon monoxide, a plan to verify continued

attainment, a contingency plan, and an obligation to submit additional information in eight years acknowledging that the maintenance plan will remain in effect through the year 2020, as required by the Clean Air Act. If the area records a violation of the carbon monoxide NAAQS (which must be confirmed by the State), New Hampshire will implement one or more appropriate contingency measure(s) which are contained in the contingency plan. The menu of contingency measures includes the enhanced safety inspection program and New Hampshire's low emission vehicle program (NLEV) as contingency measures. The redesignation request establishes a motor vehicle emissions budget of 60.13 tons per day for carbon monoxide to be used in determining transportation conformity for the Nashua area. The redesignation request and maintenance plan meet the redesignation requirements in sections 107(d)(3)(E) and 175A of the Act as amended in 1990, respectively.

PART 81—[AMENDED]

4. The authority citation for part 81 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart C—Section 107 Attainment Status Designations

5. The table in § 81.330 entitled "New Hampshire-Carbon Monoxide" is revised to read as follows:

§ 81.330 New Hampshire.

[FRL-6908-8]

RIN 2060-AI60

Petition by American Samoa for Exemption from Anti-Dumping Requirements for Conventional Gasoline

AGENCY: Environmental Protection Agency.

ACTION: Direct final rule.

SUMMARY: The Environmental Protection Agency ("EPA" or "the Agency") is granting a petition by the Territory of American Samoa for exemption from the anti-dumping requirements for gasoline sold in the United States after January 1, 1995. This action is being taken because compliance with the anti-dumping requirements is not feasible or is unreasonable due to American Samoa's unique geographic location and economic factors. If the gasoline anti-dumping exemption were not granted, American Samoa would be required to import gasoline from a supplier meeting the anti-dumping requirements adding a considerable expense to gasoline

purchased by the American Samoan consumer. American Samoa is in full attainment with the National Ambient Air Quality Standard ("NAAQS") for ozone. This action is not expected to cause harmful effects to the citizens of American Samoa.

EPA is concurrently proposing in the Proposed Rules section of today's **Federal Register** approval of American Samoa's petition for reasons discussed in this document. The EPA will not institute a second comment period on this document. Any parties interested in commenting on this action should do so at this time. All correspondence should be directed to the addresses shown below.

DATES: This action will be effective on January 29, 2001, unless the Agency receives adverse or critical comments or a request for a public hearing by December 29, 2000. If the Agency receives adverse or critical comments, EPA will publish in the **Federal Register** timely notice withdrawing this action and the comments will be addressed in a subsequent final rule. If a request for a public hearing is received, this will be addressed in a subsequent **Federal Register** document.

ADDRESSES: Any persons wishing to submit comments should submit them (in duplicate, if possible) to the two dockets listed below, with a copy forwarded to Marilyn Winstead McCall, U.S. Environmental Protection Agency,

Transportation and Regional Programs Division, 1200 Pennsylvania Avenue, NW., (Mail Code: 6406J), Washington, DC 20460.

Public Docket: Materials relevant to this petition are available for inspection in public docket A-99-17 at the Air Docket Office of the EPA, Room M-1500, 401 M Street, SW., Washington, D.C. 20460, (202) 260-7548, between the hours of 8 a.m. to 5:30 p.m., Monday through Friday. A duplicate public docket A-91-40 has been established at U.S. EPA Region IX, 75 Hawthorne Street, (Mail Code: A-2-1), 17th Floor, San Francisco, CA 94105, (415) 744-1225, and is available between the hours of 8:30 a.m. to noon, and from 1 p.m. to 5 p.m., Monday through Friday. As provided in 40 CFR part 2, a reasonable fee may be charged for copying services.

FOR FURTHER INFORMATION CONTACT: Marilyn Winstead McCall at (202) 564-9029, facsimile: (202) 565-2085, e-mail address: McCall.mwinstead@epamail.epa.gov.

SUPPLEMENTARY INFORMATION:

Regulated Entities

Entities potentially affected by this rule are those involved with the production, distribution, importation, and sale of conventional gasoline used in the Territory of American Samoa. Regulated categories and entities include:

**EVIDENCE THAT NEW HAMPSHIRE FOLLOWED ALL
PROCEDURAL REQUIREMENTS**

40 CFR Part 51, Appendix V, 2.1(e)

PROPOSED AMENDED LANGUAGE

NASHUA, NH CO MAINTENANCE PLAN - PROPOSED AMENDED LANGUAGE

Referring to the document "Request to Redesignate the City of Nashua, New Hampshire to Attainment for Carbon Monoxide" dated December 3, 1998:

Section 6.5.3 "**Selection of a Nonattainment Indicator**" (page 27) currently states:

"The 9/4/92 EPA/Calcagni memorandum (Section 5e) obligates the State to select a contingency threshold or 'trigger,' such as a monitored CO exceedance or violation, and commit to implementing the appropriate contingency measure once the threshold is exceeded. For the purposes of this plan, New Hampshire is proposing to implement its contingency program in the event that a CO violation (the 'contingency trigger') is monitored in Nashua in any year during the maintenance period and to consider one or more of the other EPA-approved measures... if necessary." (Italics added)

New Hampshire proposes to revise the italicized portion of Section 6.5.3, above, to read as follows:

"For the purposes of this plan, New Hampshire will be discontinuing CO monitoring in Nashua upon EPA approval of this revised plan. New Hampshire DES will continue to collect and review CO monitoring data from nearby Manchester, NH on an on-going basis. In the event the second-highest CO concentration in any calendar year monitored in Manchester reaches 75 percent of the federal 1-hour or 8-hr national ambient air quality standard (NAAQS) for CO, New Hampshire will, within nine (9) months of recording such concentrations, re-establish a CO monitoring site in Nashua consistent with EPA siting criteria, and resume analyzing and reporting those data. New Hampshire will continue to commit to implement its contingency program in Nashua in the event that a CO violation (the 'contingency trigger') is monitored at the re-established Nashua monitoring site at any time during the maintenance period, and to consider one or more of the other EPA-approved measures listed in Section 6.5.2 if necessary to reduce CO levels.

If the Manchester CO monitor measures a violation of either the federal 1-hour or 8-hour NAAQS for CO, the contingency measures in Section 6.5.2 will be implemented in Nashua as well, until a re-established Nashua CO monitor shows that the area is in attainment of the CO standard. When implementing contingency measures, New Hampshire will review and implement the measures necessary to remedy the violation, including transportation control measures (TCM) or other additional vehicle or fuel controls."

**PROCESS THROUGH WHICH THE AMENDED LANGUAGE
WAS DEVELOPED**

The State of New Hampshire
Department of Environmental Services

Thomas S. Burack
Commissioner

December 5, 2006

Robert Varney, Administrator
US Environmental Protection Agency - Region I
1 Congress Street, Suite 1100
Boston, MA 02114-2023

Re: Request to discontinue CO monitoring in Nashua, NH

Dear Administrator Varney:

The City of Nashua, New Hampshire was designated nonattainment for carbon monoxide (CO) on April 11, 1980 (45 FR 24869), and in 1991, following passage of the 1990 Clean Air Act Amendments, retained this designation by law (see 56 FR 56694), although ambient monitoring showed attainment at that time. On February 2, 1999 the State of New Hampshire submitted a formal CO redesignation request for Nashua, and on November 29, 2000, EPA redesignated the Nashua nonattainment area to attainment for the CO standard and approved New Hampshire's maintenance plan (65 FR 71060). Since that time there have been no violations of the CO standard of 9ppm (8 hr average) in Nashua, and CO is trending downwards to a level well less than half the standard (see <http://www.epa.gov/region1/airquality/co.html> and also the attached graph). In the maintenance plan submitted on December 3, 1998 and approved by the above action, New Hampshire agreed to do the following:

- Provide Attainment Emission Inventory, base year and projected, 1999-2020 (approved into the SIP at 65 FR 71060).
- Verify Continued Attainment (see attached graph).
- Adopt Contingency Measures if needed:
 - NH Low Emission Vehicle Program (NLEV), approved into the SIP at 65 FR 12476.
 - NH Enhanced Safety Inspection Program (alternative I&M SIP), published at 63 FR 69589).

Note that both of these contingency measures were adopted for ground-level ozone control, not in response to any CO violation. Note further that NLEV has since been superceded by the federal Tier II motor vehicle regulations.

New Hampshire would like to discontinue monitoring for CO in Nashua, effective December 31, 2006. Nashua is a "sole pollutant" site, monitoring only CO. DES allocates considerable resources each year to cover the lease agreement with the property owner, maintenance of the monitoring and support equipment, phone and electricity, travel to and from the site from the main office in Concord, and staff time to conduct routine and emergency maintenance, all of which are resources that could better be used elsewhere in the state's monitoring program.

In addition to the downward trend shown by the monitoring data, New Hampshire has performed mobile source modeling and conformity analyses which indicate that winter CO levels in Nashua will not reach even half the CO Budget as far out into the future as 2025, which is beyond the end of the maintenance plan (see attached table). Due to planning considerations for this site we request EPA's review and response to this request as soon as practicable. Thank you for your consideration.

Sincerely,

Robert R. Scott, Director
Air Resources Division

Robert R. Scott, Director
Air Resources Division
P.O. Box 95
29 Hazen Drive
Concord, NH 03302

Dear Mr. Scott:

Thank you for your letter dated December 5, 2006 in which you request to discontinue monitoring for carbon monoxide (CO) in Nashua, New Hampshire. As noted in your letter, EPA approved a redesignation request for Nashua on November 29, 2000 (65 FR 71060). Part of that approval included a commitment by New Hampshire to continue CO monitoring in Nashua to ensure that the standard was being maintained, and to implement contingency measures, should air quality problems reappear.

On October 17, 2006, EPA published a final monitoring rule revising minimum monitoring requirements. That rule explicitly recognizes that, in some cases where measured levels of pollutants are low, shutting down certain CO monitors may be allowed. The rule, however, also explicitly provides that if a monitor is the only monitor in the area, and it serves as a trigger to implement a contingency measure in an EPA approved maintenance plan, the maintenance plan would need to be revised, and the trigger replaced. (See 71 FR 61250 and 71 FR 61301.)

Your letter provided information which showed that the CO concentration measured in Nashua has been below the NAAQS for nearly 20 years, and in recent years has been below one-half of the 9 parts per million 8-hour CO standard. Therefore, we support the State of New Hampshire moving forward to revise its air quality monitoring plan and its federally approved CO maintenance plan to discontinue the Nashua CO monitor. Part of revising the maintenance plan in this regard should include establishing an appropriate alternative triggering mechanism intended to remedy any future CO air quality problems in the Nashua area. We believe a reasonable alternative would include review of data from nearby CO monitors, such as in Manchester.

In addition, a second 10 year maintenance plan for both Nashua and Manchester is due in 2008. For these second 10 year maintenance plans, EPA recommends that New Hampshire develop limited CO maintenance plans since both areas have very low CO levels. This would allow the areas to avoid performing a regional CO analysis for conformity in the future.

David B. Conroy
Chief, Air Programs Branch
U.S. Environmental Protection Agency (EPA)
1 Congress Street, Suite 1100
Boston, MA 02114-2023

Dave
Dear Mr. Conroy:

Thank you for your letter dated December 27, 2006, responding to my letter of December 5, 2006, requesting to discontinue monitoring for carbon monoxide (CO) in Nashua, New Hampshire. EPA approved a redesignation request for Nashua on November 29, 2000 (65 FR 71060). Part of that approval included a commitment by New Hampshire to continue CO monitoring in Nashua to ensure that the standard was being maintained, and to implement contingency measures, should CO air quality problems reappear.

In my letter of December 5, 2006 I provided information showing that the CO concentrations measured in Nashua have been below the NAAQS for nearly 20 years, and in recent years have been below one-half of the 9 ppm 8-hr CO standard. In your response of December 27, 2006, you state that EPA supports New Hampshire in this regard, but in order for New Hampshire to cease monitoring for CO in Nashua, it must first revise its Nashua CO maintenance plan to provide an appropriate alternative triggering mechanism intended to remedy any future CO air quality problems which might arise in the Nashua area. EPA suggests that a reasonable alternative would include the review of data from nearby CO monitors, such as Manchester, a site which New Hampshire will continue to operate. See attached chart for a comparison of recent CO concentrations at the Nashua and Manchester sites.

New Hampshire understands that revising an existing maintenance plan requires a public participation process. Accordingly, the state proposes the following draft revision to the Nashua CO maintenance plan. Once an appropriate alternative triggering mechanism is approved in concept by EPA, we will start the public participation process.

Referring to the document "Request to Redesignate the City of Nashua, New Hampshire to Attainment for Carbon Monoxide" dated December 3, 1998:

Section 6.5.3 "Selection of a Nonattainment Indicator" (page 27) currently states:

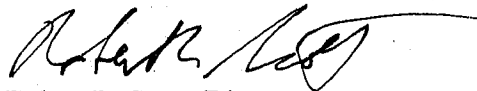

"The 9/4/92 EPA/Calcagni memorandum (Section 5e) obligates the State to select a contingency threshold or 'trigger,' such as a monitored CO exceedance or violation, and commit to implementing the appropriate contingency measure once the threshold is exceeded. *For the purposes of this plan, New Hampshire is proposing to implement its contingency program in the event that a CO violation (the 'contingency trigger') is monitored in Nashua in any year during the maintenance period (italics added) and to consider one or more of the other EPA-approved measures... if necessary.*"

New Hampshire proposes to revise the italicized portion of Section 6.5.3, above, to read as follows:

“For the purposes of this plan, New Hampshire is proposing to discontinue CO monitoring in Nashua in 2007, and alternatively, review data from the CO monitor in Manchester on an on-going basis. In the event the second-highest CO concentration in any calendar year monitored in Manchester reaches 75 percent of the federal standard, New Hampshire will re-establish a CO monitoring site in Nashua. New Hampshire will continue to commit to implement its contingency program in Nashua in the event that a CO violation (the ‘contingency trigger’) is monitored at the re-established Nashua monitoring site in any year during the maintenance period.”

I look forward to hearing from EPA on this matter. If you have any questions on this issue, please contact Kent Finemore of my staff at 603-271-1382, or kfinemore@des.state.nh.us.

Sincerely,

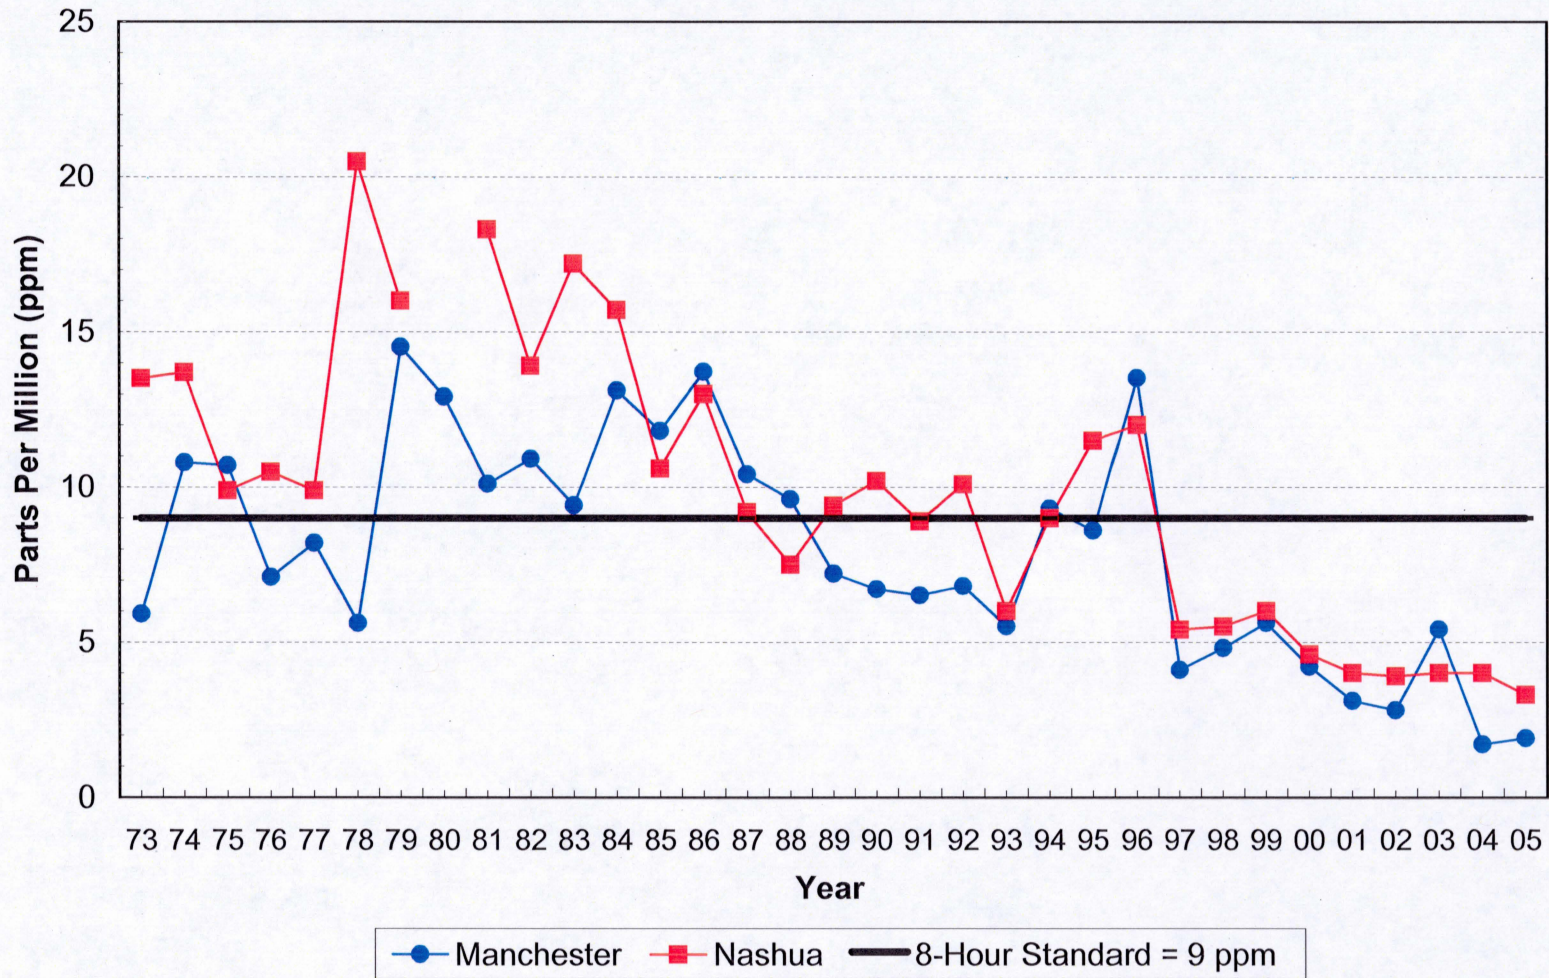

Robert R. Scott, Director
Air Resources Division

AIR RESOURCES DIVISION

March 15, 2007

Robert R. Scott, Director
Air Resources Division
Department of Environmental Services
P.O. Box 95
29 Hazen Drive
Concord, NH 03302

Dear Mr. Scott:

Thank you for your letter, dated February 20, 2007, continuing our discussion on the steps needed to discontinue monitoring for carbon monoxide (CO) in Nashua, New Hampshire. EPA approved a redesignation request for Nashua on November 29, 2000 (65 FR 71060). Part of that approval included a commitment by New Hampshire to continue CO monitoring in Nashua to ensure that the standard was being maintained, and to implement contingency measures, should air quality problems reappear.

EPA published a final monitoring rule revising minimum monitoring requirements on October 17, 2006. That rule explicitly recognizes that, in some cases where measured levels of pollutants are low, shutting down certain CO monitors may be allowed. The rule, however, also explicitly provides that if a monitor is the only monitor in the area, and it serves as a trigger to implement a contingency measure in an EPA approved maintenance plan, the maintenance plan would need to be revised, and the trigger replaced. (See 71 FR 61250 and 71 FR 61301.) The monitor DES is proposing to discontinue is the only CO monitor in the Nashua area.

In your February 20, 2007 letter, you propose to revise certain language in Section 6.5.3 of the Nashua maintenance plan regarding the triggering mechanism related to CO levels in Nashua. We agree with the intent of your revised language, and, below, have added some additional clarifications which we believe would represent an acceptable change to your maintenance plan.

"For the purposes of this plan, New Hampshire will be discontinuing CO monitoring in Nashua upon EPA approval of this revised plan. New Hampshire DES will review CO monitoring data from nearby Manchester, NH on an on-going basis. In the event the second highest CO concentration in any calendar year monitored in Manchester reaches 75 percent of the federal 1-hour or 8-hour national ambient air quality standard for CO, New Hampshire will, within 9 months of recording such concentrations, re-establish a CO monitoring site in Nashua consistent with EPA siting criteria and begin reporting and analyzing that data. New Hampshire will continue to commit to implement its contingency

program in Nashua in the event that a CO violation (the 'contingency trigger') is monitored at the re-established Nashua monitoring site at any time during the maintenance period and to consider one or more of the other EPA-approved measures listed in Section 6.5.2 if necessary.

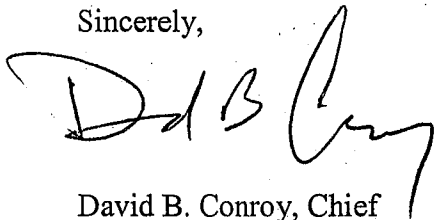

If the Manchester CO monitor measures a violation of the CO standard, the contingency measures in Section 6.5.2 will be implemented in Nashua as well, until a re-established Nashua CO monitor shows that the area is attainment of the CO standard.

When implementing contingency measures, New Hampshire will review and implement the measures necessary to remedy the violation, including TCMs or other additional vehicle or fuel controls."

In addition, a second 10 year maintenance plan for both Nashua and Manchester is due in 2008. For these second 10 year maintenance plans, EPA recommends that New Hampshire develop limited CO maintenance plans since both areas have very low CO levels. This would allow the areas to avoid performing a regional CO analysis for conformity in the future.

As you know, revising an existing maintenance plan requires a public participation process. We urge you to move forward with this process if you intend to discontinue monitoring in Nashua. Please keep us informed as you move forward. If you have any questions on this issue, please contact Bob Judge of my staff at 617-918-1045.

Sincerely,

David B. Conroy, Chief

EVIDENCE OF PUBLIC NOTICE

40 CFR Part 51, Appendix V, 2.1(f)

**STATE OF NEW HAMPSHIRE
DEPARTMENT OF ENVIRONMENTAL SERVICES
AIR RESOURCES DIVISION
CONCORD, NH**

NOTICE OF PUBLIC HEARING

In accordance with N.H. Administrative Rule Env-A 204.01(b), notice is hereby given that the New Hampshire Department of Environmental Services, Air Resources Division (the Department) will hold a public hearing on proposed revisions to the maintenance plan for the former Nashua carbon monoxide (CO) non-attainment area on Tuesday, May 15, 2007. The public hearing will be held in Room 214, 2nd floor of the offices of the Department of Environmental Services, 29 Hazen Drive, Concord, NH.

At 10:00 a.m. on May 15, 2007, the Department will receive testimony from the public concerning proposed revisions to the maintenance plan for the former Nashua carbon monoxide (CO) non-attainment area. Nashua was designated non-attainment for CO on April 11, 1980, but as CO concentrations fell during the 1980s and 1990s, Nashua was redesignated as in attainment for CO on November 29, 2000. When an area that was previously designated as non-attainment for any of the pollutants for which the U.S. EPA has developed a National Ambient Air Quality Standard (NAAQS) applies for redesignation to attainment status, the federal Clean Air Act requires the Department to submit a maintenance plan as part of the redesignation request. This plan shows how the area will stay in attainment for the subsequent 10 years, and what steps the Department will take if it does not. The Department filed this plan with the U.S. EPA on December 3, 1998, and the plan will be updated for an additional 10 years by December 2008.

As part of the Nashua CO maintenance plan, the Department committed to continue monitoring CO levels in downtown Nashua for the duration of the plan. However, the CO levels in Nashua have decreased to the point that a future exceedance of the federal standards for CO is now highly unlikely, due primarily to improvements in automobile emission controls. Accordingly, the Department is now proposing to revise the Nashua CO maintenance plan to stop monitoring for CO in Nashua. The Department will continue to monitor for CO in the former Manchester CO non-attainment area to watch for urban trends, and will commit to reinstating CO monitoring in Nashua if the Manchester site starts to trend upwards again beyond a certain point.

Testimony may be presented orally and/or in writing at the public hearing. The department will receive written comments on the proposed rules until 4:00 p.m. on May 25, 2007. Please submit written comments to Brian Jennison, Planning Specialist, Air Resources Division, NH Department of Environmental Services, P.O. Box 95, Concord, NH 03302-0095, Fax (603) 271-7053, or bjennison@des.state.nh.us. A copy of the proposed revisions to the Nashua CO maintenance plan may be obtained electronically from the Department upon request.

Thomas S. Burack
Commissioner
NH Department of Environmental Services

Legal Notice

**STATE OF NEW HAMPSHIRE
DEPARTMENT OF
ENVIRONMENTAL SERVICES
AIR RESOURCES DIVISION
CONCORD, NH**

NOTICE OF PUBLIC HEARING

In accordance with N.H. Administrative Rule Env. A 204.01(b), notice is hereby given that the New Hampshire Department of Environmental Services, Air Resources Division (the Department) will hold a public hearing on proposed revisions to the maintenance plan for the former Nashua carbon monoxide (CO) non-attainment area on Tuesday, May 15, 2007. The public hearing will be held in Room 214, 2nd floor of the offices of the Department of Environmental Services, 29 Hazen Drive, Concord, NH.

At 10:00 a.m. on May 15, 2007, the Department will receive testimony from the public concerning proposed revisions to the maintenance plan for the former Nashua carbon monoxide (CO) non-attainment area. Nashua was designated non-attainment for CO on April 11, 1980, but as CO concentrations fell during the 1980s and 1990s, Nashua was redesignated as an attainment area for CO on November 29, 2000. When an area that was previously designated as non-attainment for any of the pollutants for which the U.S. EPA has developed a National Ambient Air Quality Standard (NAAQS) applies for redesignation to attainment status, the federal Clean Air Act requires the Department to submit a maintenance plan as part of the redesignation request. This plan shows how the area will stay in attainment for the subsequent 10 years, and what steps the Department will take if it does not. The Department filed this plan with the U.S. EPA on December 3, 1998, and the plan will be updated for an additional 10 years by December 2008.

As part of the Nashua CO maintenance plan, the Department committed to continue monitoring CO levels in downtown Nashua for the duration of the plan. However, the CO levels in Nashua have decreased to the point that a future exceedance of the federal standards for CO is now highly unlikely, due primarily to improvements in automobile emission controls. Accordingly, the Department is now proposing to revise the Nashua CO maintenance plan to stop monitoring for CO in Nashua. The Department will continue to monitor for CO in the former Manchester CO non-attainment area to watch for urban trends, and will commit to reinstating CO monitoring in Nashua if the Manchester site starts to trend upwards again beyond a certain point.

Testimony may be presented orally and/or in writing at the public hearing. The department will receive written comments on the proposed rules until 4:00 p.m. on May 25, 2007. Please submit written comments to Brian Jennison, Planning Specialist, Air Resources Division, NH Department of Environmental Services, P.O. Box 95, Concord, NH 03302-0095, Fax (603) 271-7053, or bjennison@des.state.nh.us. A copy of the proposed revisions to the Nashua CO maintenance plan may be obtained electronically from the Department upon request.

STATE OF NEW HAMPSHIRE DEPARTMENT OF ENVIRONMENTAL SERVICES AIR RESOURCES DIVISION CONCORD, NH

NOTICE OF PUBLIC HEARING

In accordance with N.H. Administrative Rule Env-A 204.01(b), notice is hereby given that the New Hampshire Department of Environmental Services, Air Resources Division (the Department) will hold a public hearing on proposed revisions to the maintenance plan for the former Nashua carbon monoxide (CO) non-attainment area on Tuesday, May 15, 2007. The public hearing will be held in Room 214, 2nd floor of the offices of the Department of Environmental Services, 29 Hazen Drive, Concord, NH. At 10:00 a.m. on May 15, 2007, the Department will receive testimony from the public concerning proposed revisions to the maintenance plan for the former Nashua carbon monoxide (CO) non-attainment area. Nashua was designated non-attainment for CO on April 11, 1980, but as CO concentrations fell during the 1980s and 1990s, Nashua was redesignated as in attainment for CO on November 29, 2000. When an area that was previously designated as non-attainment for any of the pollutants for which the U.S. EPA has developed a National Ambient Air Quality Standard (NAAQS) applies for redesignation to attainment status, the federal Clean Air Act requires the Department to submit a maintenance plan as part of the redesignation request. This plan shows how the area will stay in attainment for the subsequent 10 years, and what steps the Department will take if it does not. The Department filed this plan with the U.S. EPA on December 3, 1998, and the plan will be updated for an additional 10 years by December 2008.

As part of the Nashua CO maintenance plan, the Department committed to continue monitoring CO levels in downtown Nashua for the duration of the plan. However, the CO levels in Nashua have decreased to the point that a future exceedance of the federal standards for CO is now highly unlikely, due primarily to improvements in automobile emission controls. Accordingly, the Department is now proposing to revise the Nashua CO maintenance plan to stop monitoring for CO in Nashua. The Department will continue to monitor for CO in the former Manchester CO non-attainment area to watch for urban trends, and will commit to reinstating CO monitoring in Nashua if the Manchester site starts to trend upwards again beyond a certain point.

Testimony may be presented orally and/or in writing at the public hearing. The department will receive written comments on the proposed rules until 4:00 p.m. on May 25, 2007. Please submit written comments to Brian Jennison, Planning Specialist, Air Resources Division, NH Department of Environmental Services, P.O. Box 95, Concord, NH 03302-0095, Fax (603) 271-7053, or bjennison@des.state.nh.us. A copy of the proposed revisions to the Nashua CO maintenance plan may be obtained electronically from the Department upon request.

CERTIFICATION OF PUBLIC HEARING

40 CFR Part 51, Appendix V, 2.1(g)

The State of New Hampshire
DEPARTMENT OF ENVIRONMENTAL SERVICES

Thomas S. Burack, Commissioner

May 30, 2007

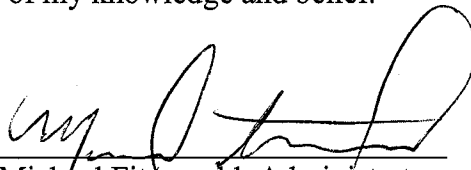

I Hereby Certify:

That, in accordance with the provisions of NH RSA 541-A:11 and section 110(a) of the Clean Air Act, as amended, public notice was given specifying that a public hearing was to be held on May 15, 2007 at 10:00 a.m. in room 214 of the offices of the New Hampshire Department of Environmental Services, Air Resources Division, 29 Hazen Drive, Concord, NH to accept comments on proposed revisions to the Nashua, NH Carbon Monoxide (CO) Maintenance Plan. The notice was published at least 30 days prior to the date of such hearing in a newspaper of general circulation. The notice stated that copies of documentation regarding revisions to the State Implementation Plan, specifically the proposed revisions to the Nashua CO Maintenance Plan, could be examined at the offices of the Department's Air Resources Division.

That the public hearing was held on May 15, 2007 at 10:00 a.m. in room 214 of the offices of the New Hampshire Department of Environmental Services, Air Resources Division, 29 Hazen Drive, Concord, NH, in accordance with the public notice.

That a complete record of the public hearing held on May 15, 2007 is available on tape at the offices of the New Hampshire Department of Environmental Services, Air Resources Division, 29 Hazen Drive, Concord, NH.

That the above statements are true to the best of my knowledge and belief.

Michael Fitzgerald, Administrator
Technical Services Bureau

UNITED STATES ENVIRONMENTAL PROTECTION AGENCY

REGION 1

1 CONGRESS STREET, SUITE 1100
BOSTON, MASSACHUSETTS 02114-2023

Robert R. Scott, Director
Air Resources Division
Department of Environmental Services
P.O. Box 95
29 Hazen Drive
Concord, NH 03302

May 17, 2007

Dear Mr. Scott:

EPA supports the State of New Hampshire's proposal to revise its carbon monoxide (CO) maintenance plan for which a public hearing is scheduled for May 15, 2007. As part of its modified CO maintenance plan, New Hampshire is intending to shut down the Nashua CO monitor, and use the Manchester CO monitor as a surrogate to identify potential CO problems in the Nashua area.

EPA approved a redesignation request for Nashua on November 29, 2000 (65 FR 71060). Part of that approval included a commitment by the New Hampshire Department of Environmental Services (NH DES) to continue CO monitoring in Nashua to ensure that the standard is being maintained, and to implement contingency measures, should air quality problems reappear. EPA and the NH DES previously exchanged letters on this issue.

EPA agrees that the criteria outlined in this public hearing package represents a reasonable plan modification and approach for shutting down a CO monitor that is currently measuring concentrations well below the existing 1 hour and 8 hour CO national ambient air quality standards. As described in the proposed revised plan, NH DES will review CO monitoring in Manchester on an ongoing basis. The Nashua CO monitor would be reestablished, and/ or pollution reducing strategies implemented if CO concentrations in Manchester exceeded certain thresholds. Under this plan, we believe air quality goals can be maintained and State monitoring resources conserved.

We will work closely with you to act on the revised maintenance plan once it is adopted by the State, and submitted to EPA. If you have any questions on this issue, please contact Bob Judge of my staff at 617-918-1045.

Sincerely,

David B. Conroy, Chief
Air Programs Branch
